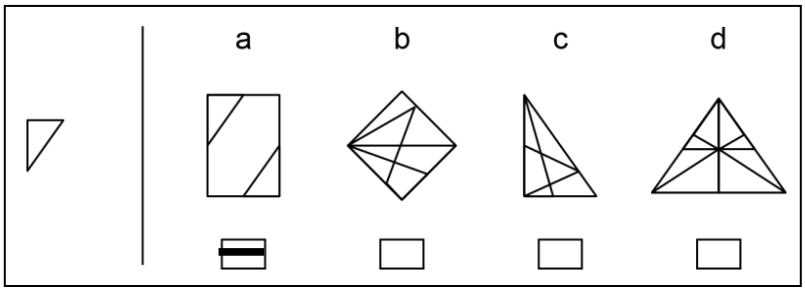
Non-Verbal Reasoning

10. HIDDEN SHAPE / TYPE 10

Example



Explanation

A is the correct answer. The hidden triangle can be seen outlined in bold.

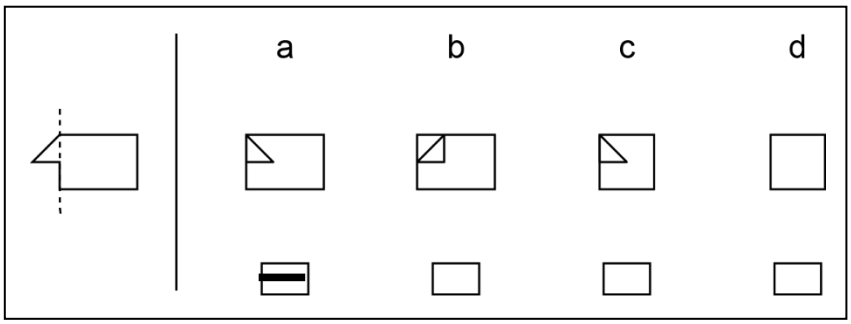
Non-Verbal Reasoning

11. FOLD ALONG THE DOTTED LINE / TYPE 11

Example



Explanation

A is the correct answer. Folding along the dotted line will create a large rectangle shape with a small right-angled triangle over the top left corner.

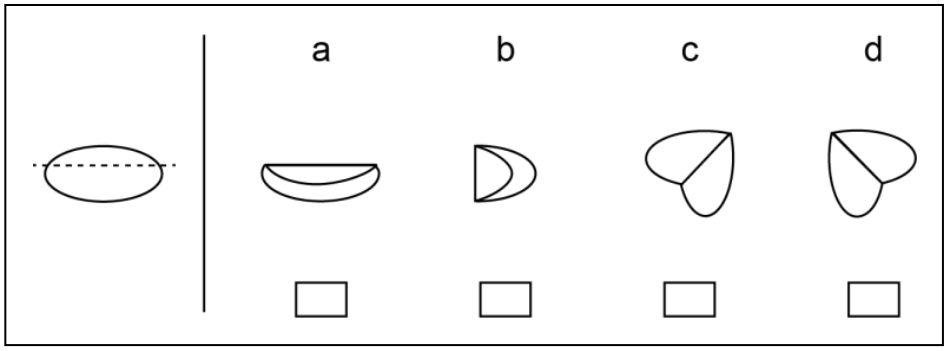
3



Non-Verbal Reasoning

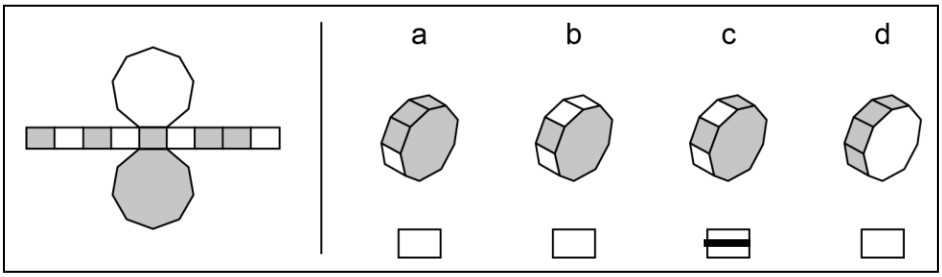
13. SHADED NETS / TYPE 13

Example



Explanation

The answer cannot be A because in the net three shaded rectangles do not appear next to each other consecutively. The answer cannot be B because in the net two white rectangles do not appear next to each other. The answer cannot be D because in the net four shaded rectangles do not appear next to each other consecutively. Therefore the answer is C.

Non-Verbal Reasoning

Hidden Shape

1. **C** -

2. **D** -

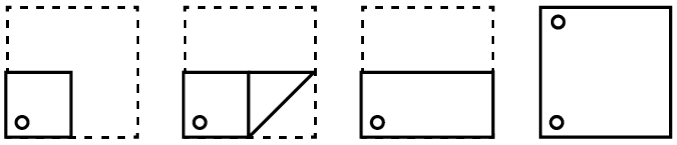
3. **C** -

Fold Along the Dotted Line

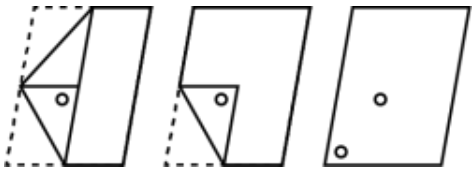
1. **C** - (The bottom portion of the shape folds up so that the wider legs of the original 'A' shape now form a 'V' with the top of the original 'A' shape visible underneath.)
2. **B** - (The right portion of the shape folds behind the left portion of the shape with the effect that it appears to be cut off.)
3. **A** - (The top portion of the shape folds over the top of the bottom portion.)

Hole Punch

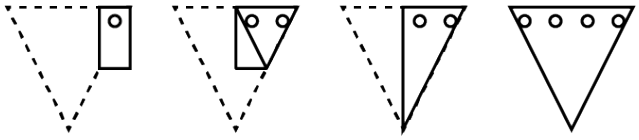
1. **C** -



2. **C** -



3. **A** -



Shaded Nets

1. **A** - (The shape is being viewed from above so that the longest rectangle from the net is seen. Therefore the answer must be A because it is the only answer that has the longest rectangle as white, not shaded.)
2. **A** - (You can see from the net that the base must be white with all other faces being shaded.)
3. **B** - (You can see from the net that both of the hexagonal faces must be shaded, ruling out answer D. You can also see that the rectangular faces must alternate white, shaded, white, shaded, white, shaded. Therefore B is the correct answer.)
