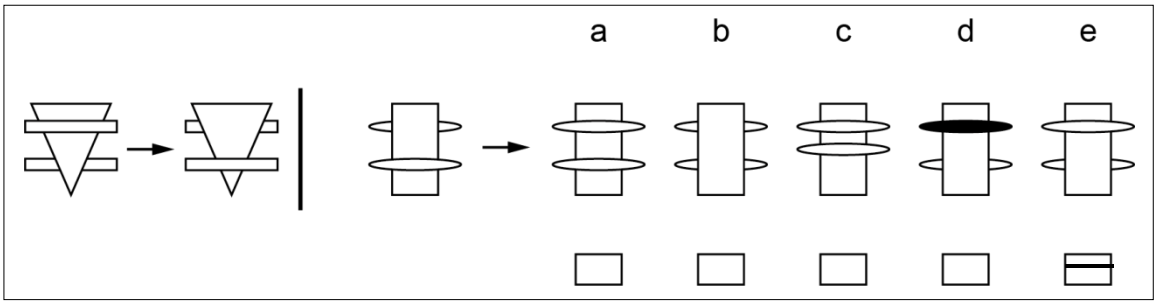
Non-Verbal Reasoning

1. LIKE SHAPES / TYPE 1

Example



Explanation

There is no change in the large shape from the first set of shapes to the second. However the shape that is behind the larger moves to the front and the other shape that is in front moves behind.

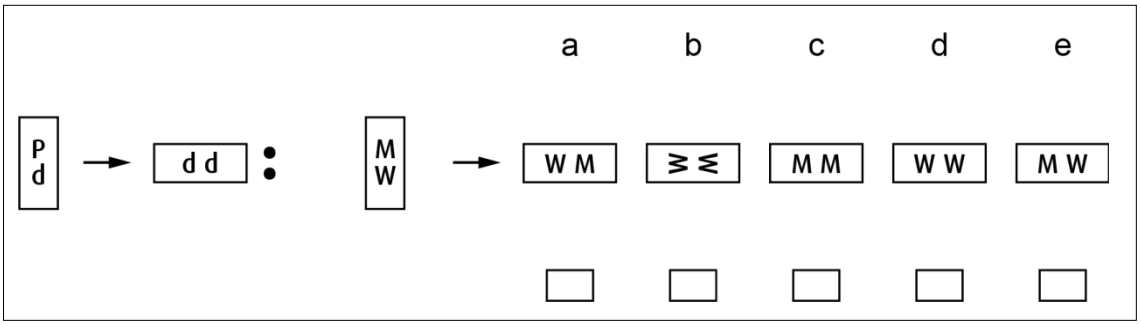
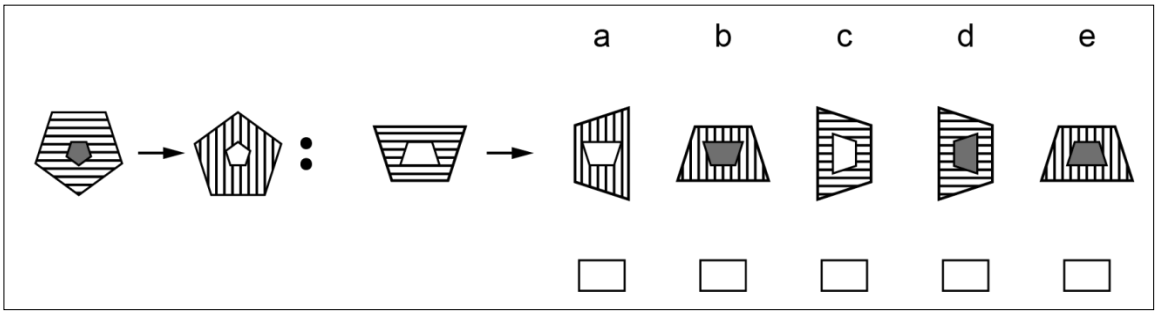
2



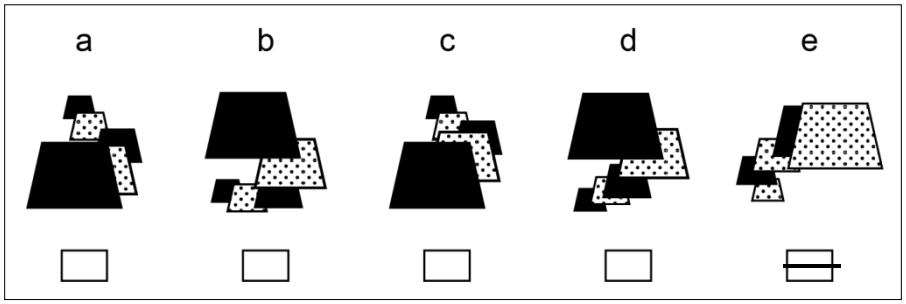
3



Non-Verbal Reasoning

2. ODD ONE OUT / TYPE 2

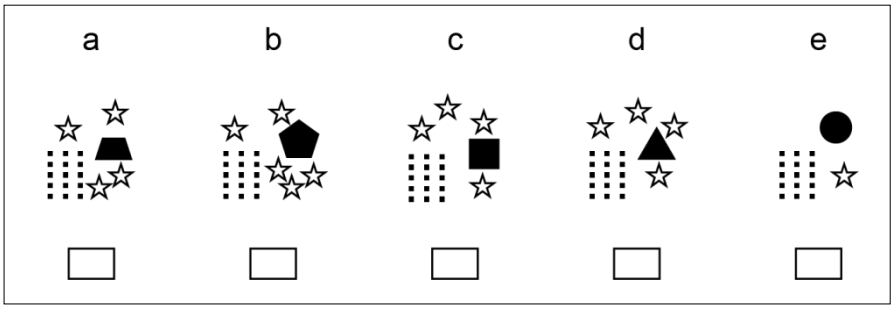
Example



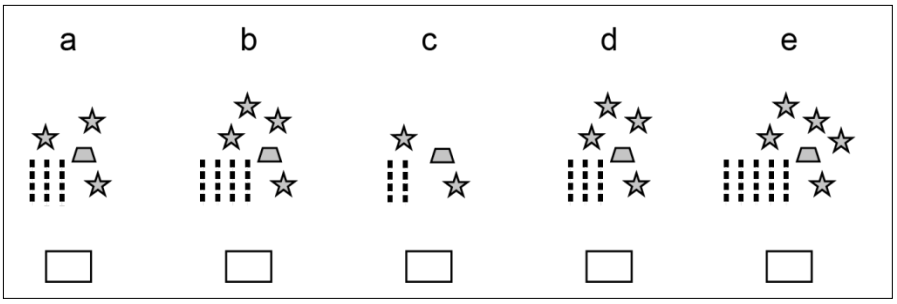
Explanation

Answers A, B, C and D all start with a black shape on top then alternate between dotted and black. But E starts with a dotted shape then alternates between black and dotted.

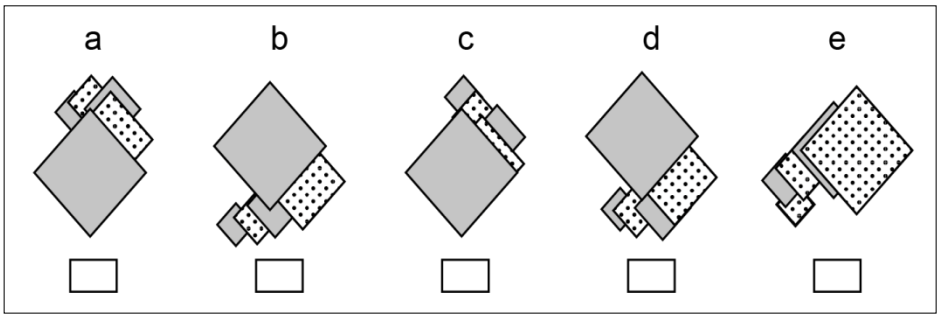
1



2



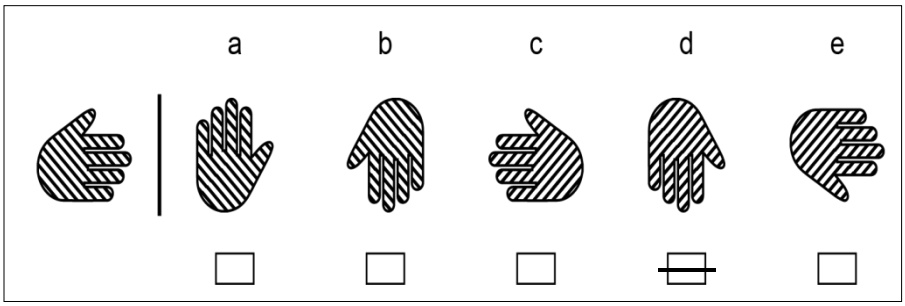
3



Non-Verbal Reasoning

3. ROTATIONS / TYPE 3

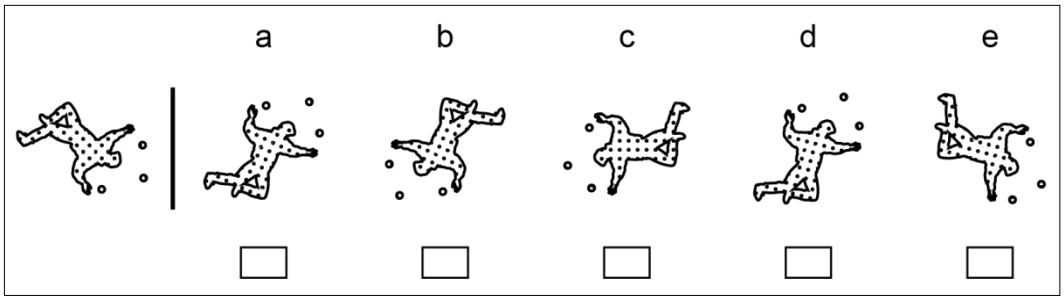
Example



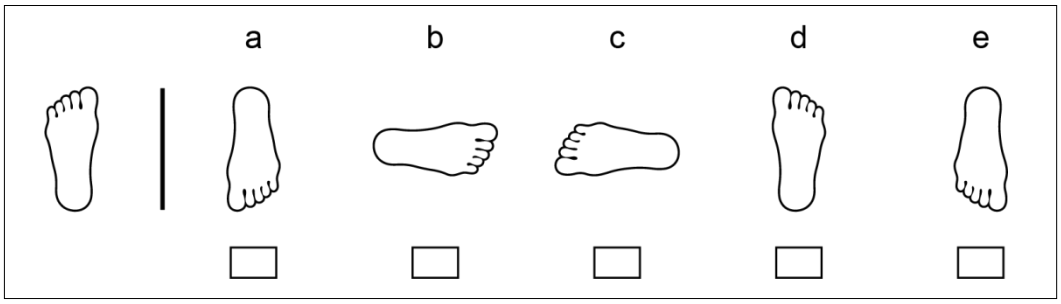
Explanation

Only one of the answers is a rotation of the original. D is the only possible answer as it is the only hand with the thumb still on the left hand side. The lines also go from the bottom left of the hand to the top right.

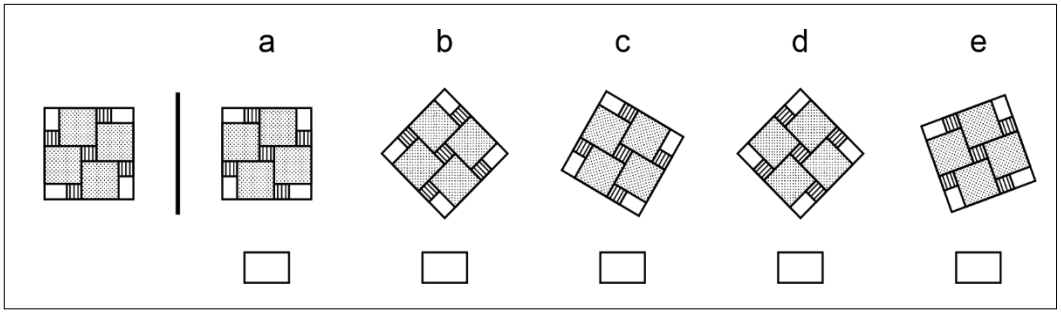
1



2



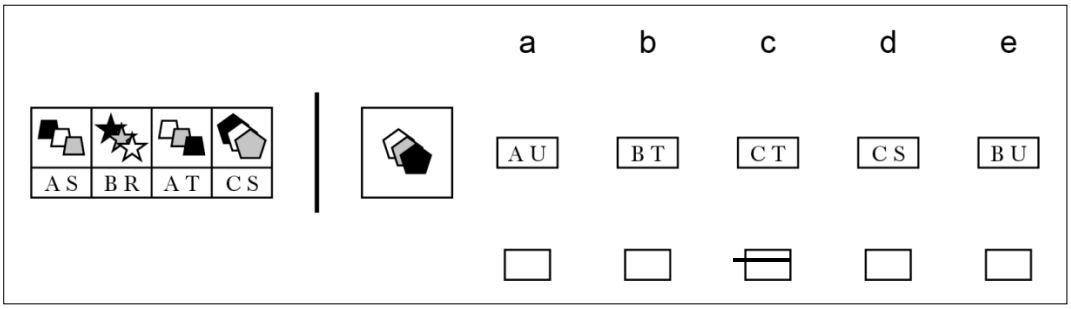
3



Non-Verbal Reasoning

4. CODE BREAKER / TYPE 4

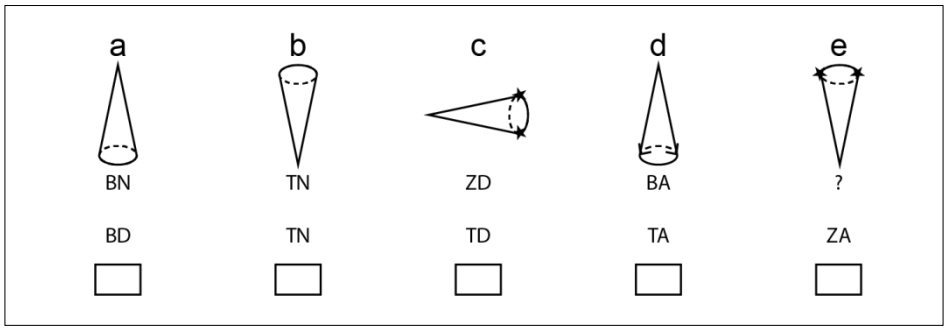
Example



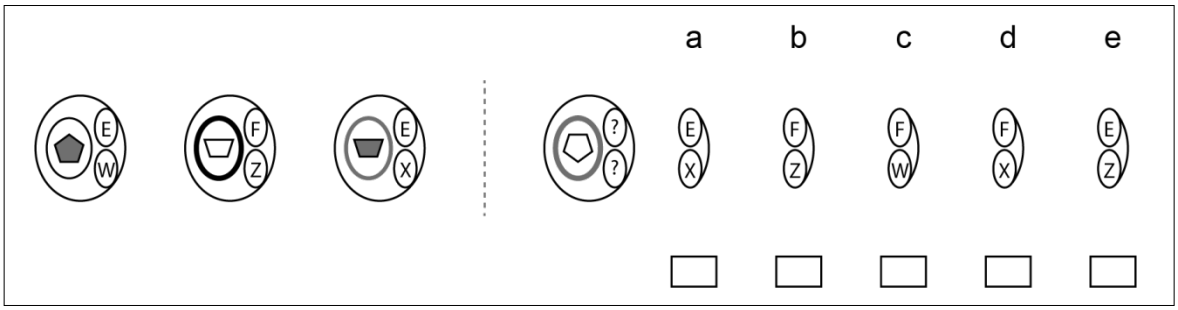
Explanation

You can work out that A is the trapezium as there are two of them. Therefore this means that B is the star and C is the pentagon. There are two S's in the second letter, so this must mean that S stands for the order of shading being black, white, light. White, light, black is therefore T. So the final answer is CT.

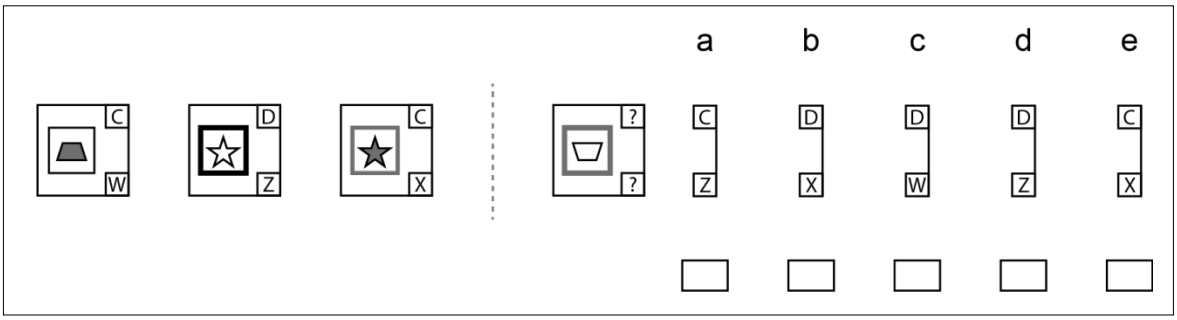
1



2



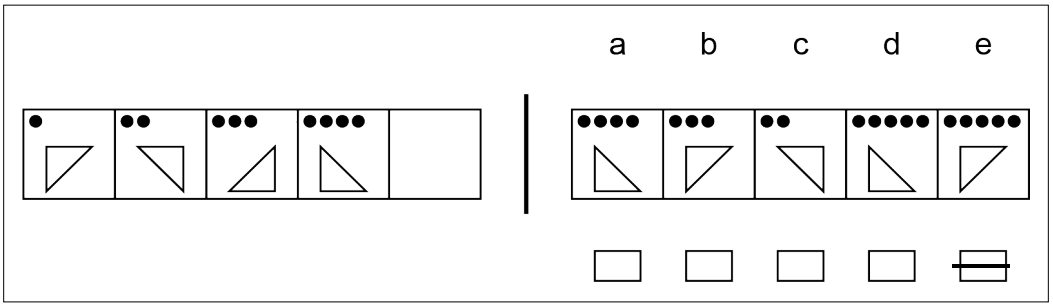
3



Non-Verbal Reasoning

5. MISSING SEQUENCE / TYPE 5

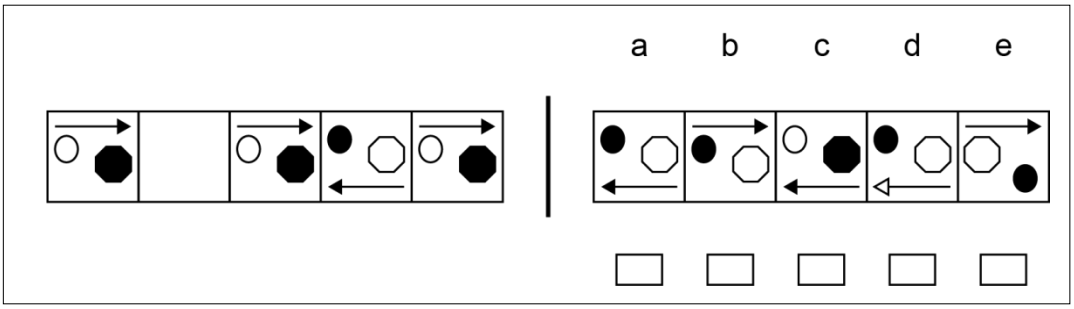
Example



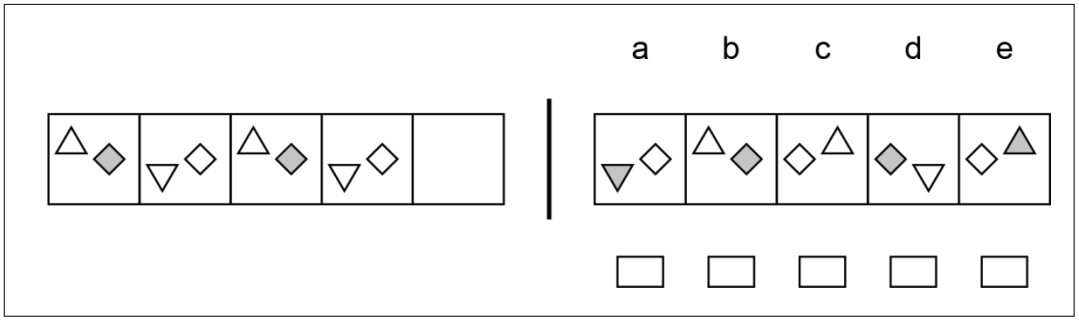
Explanation

The first sequence to look at is that the number of circles at the top of each square is increasing by 1 each time. This means that you know that the answer is either D or E as the final square will have 5 circles. The next part is to look at the triangles which are rotating 90 degrees clockwise each time. This means that you know the final answer is E.

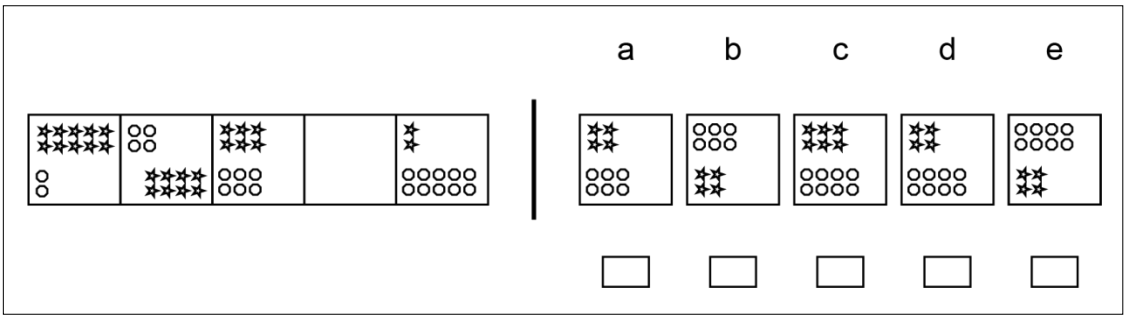
1



2



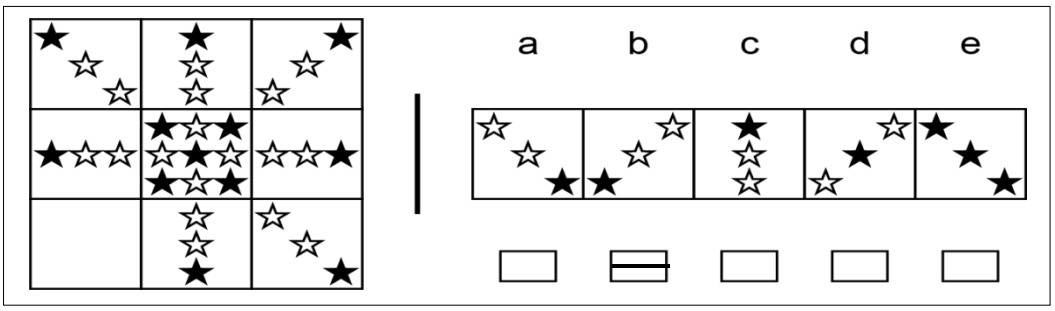
3



Non-Verbal Reasoning

6. MISSING SQUARE / TYPE 6

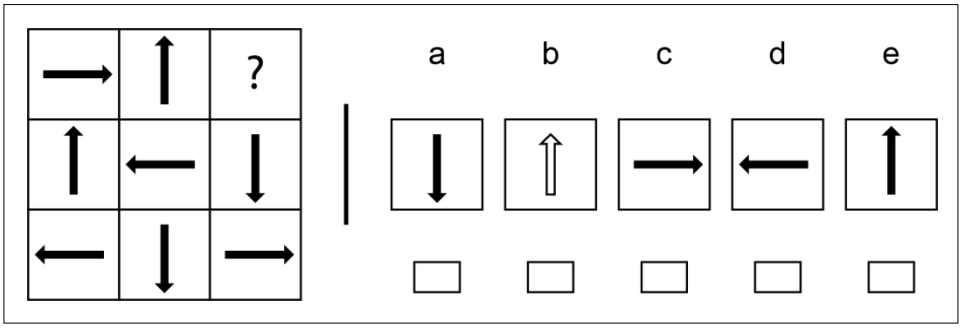
Example



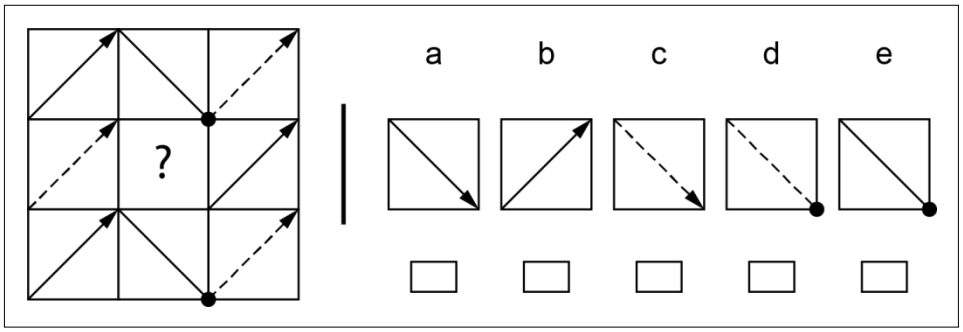
Explanation

In the three given corner squares, there are three starts, one black in the outermost corner and two white. The direction of the line of stars is always pointing towards the centre square. Therefore the answer must be B.

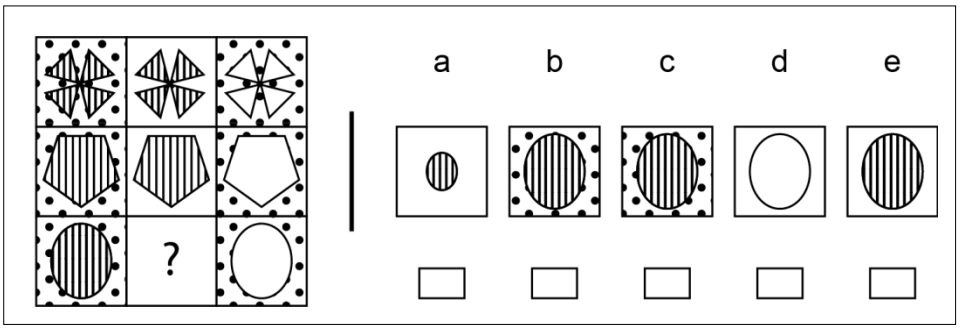
1



2



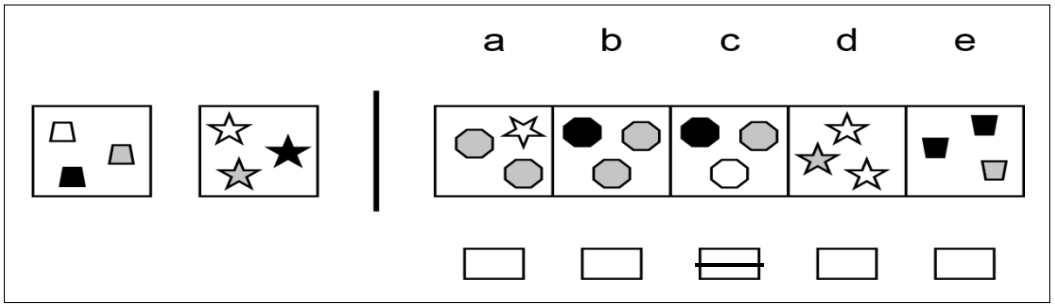
3



Non-Verbal Reasoning

7. MOST LIKE / TYPE 7

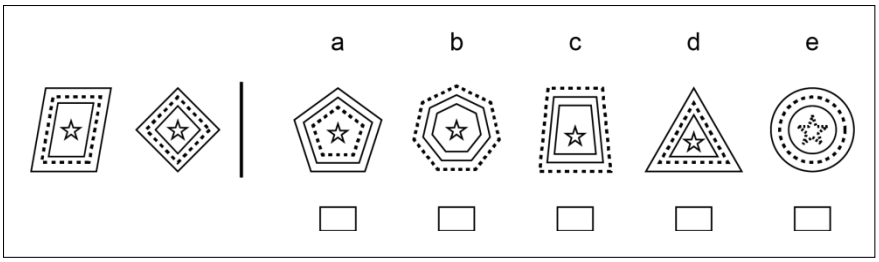
Example



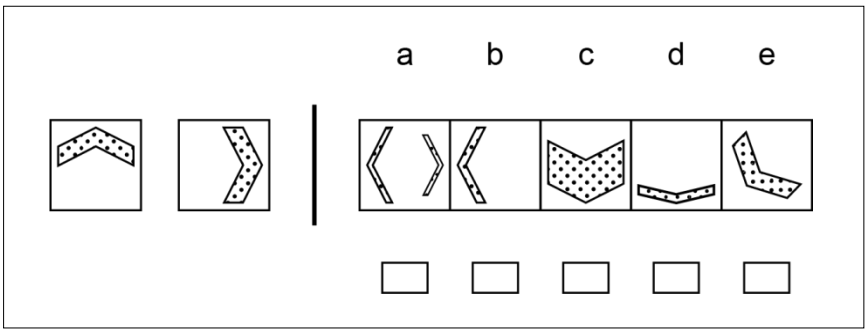
Explanation

In the first two squares, the two sets of shapes are different and the order of colours is different. The similarity is the fact that there is one black, one white and one lightly shaded shape. Therefore the answer must be C.

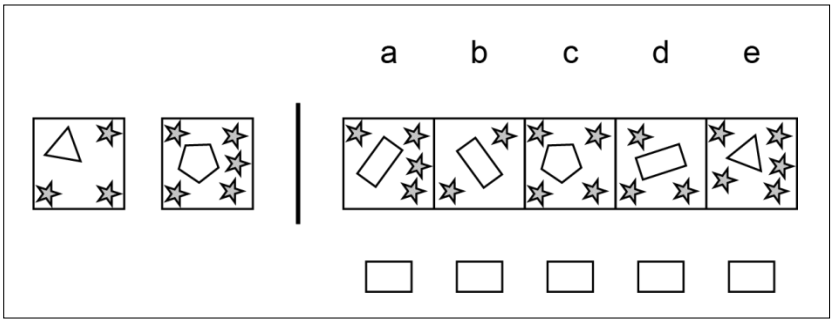
1



2



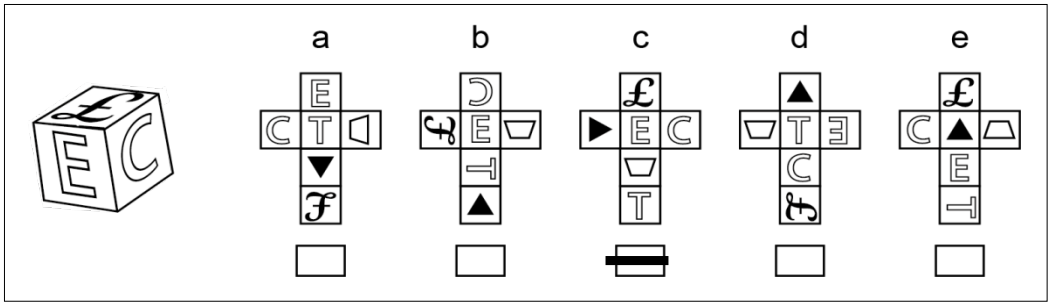
3



Non-Verbal Reasoning

8. NETS / TYPE 8

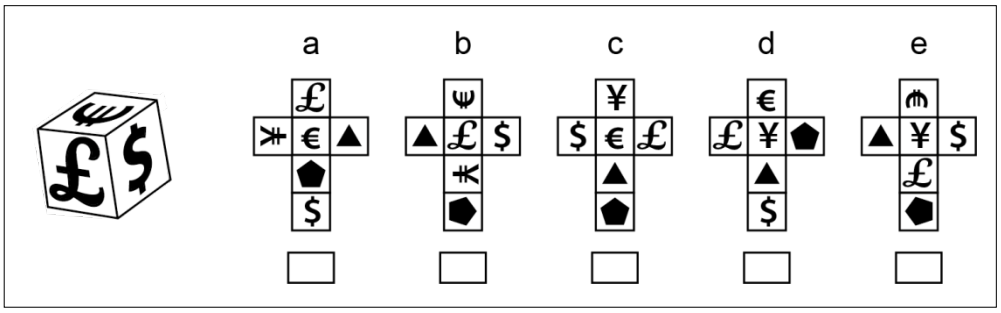
Example



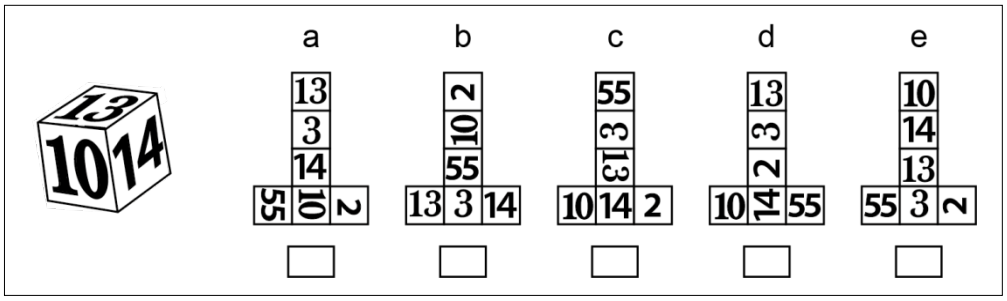
Explanation

You can see from the cube that the bottom of the £ sign should line up with the top of the E. The right hand side of the E should also line up with the left hand side of the C. From this information, you can see that C is the only possible answer.

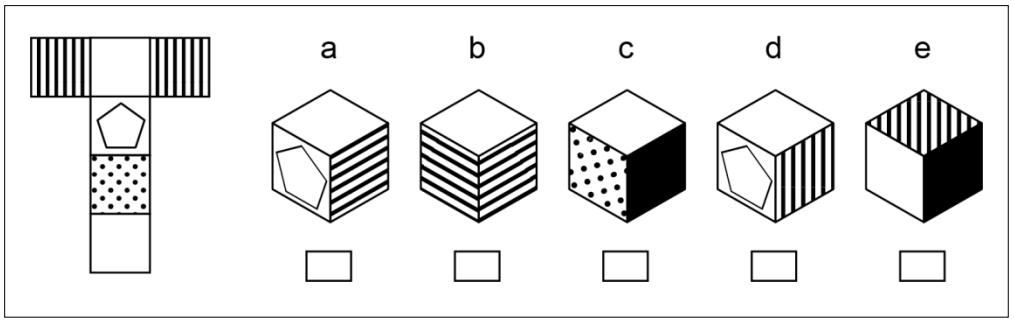
1



2



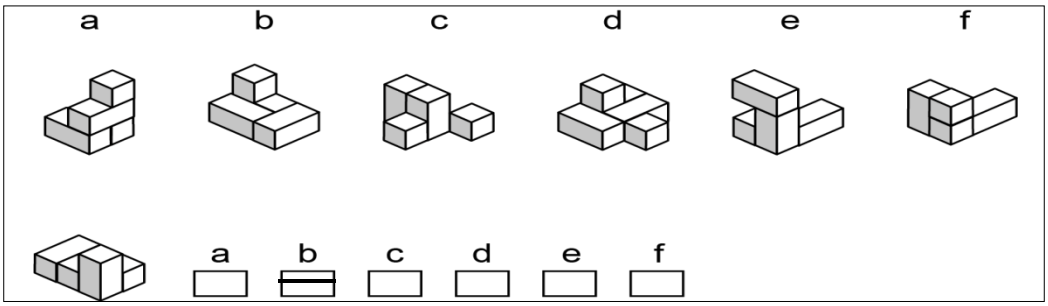
3



Non-Verbal Reasoning

9. 3D SHAPES / TYPE 9

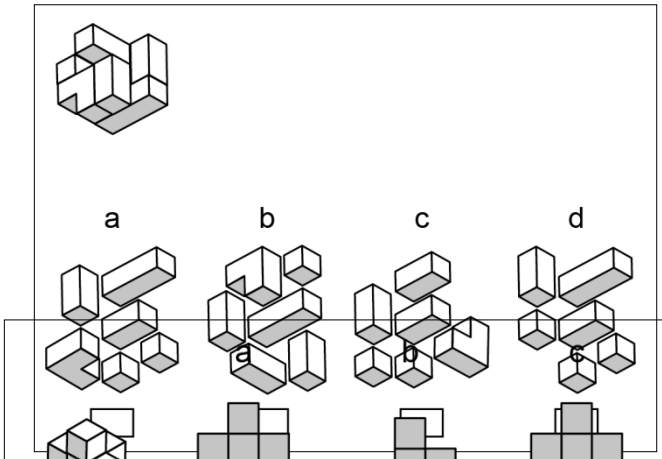
Example



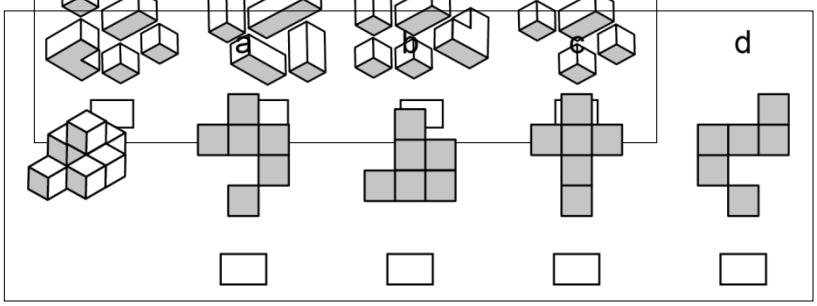
Explanation

You are trying to work out which answer rotates to give the new shape at the bottom. In this case you can see B has rotated 180 degrees so the answer is B.

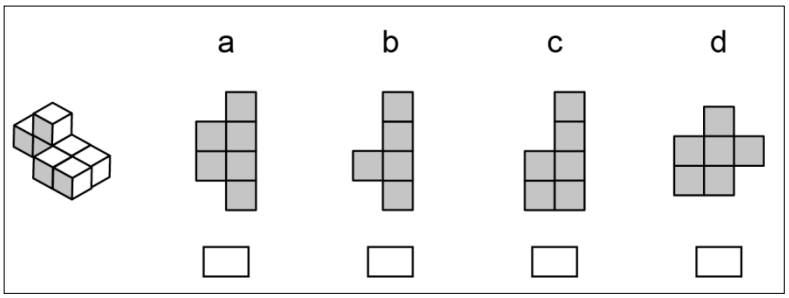
1



2



3



Like Shapes

1. **C** - (The shape simply changes from black to white.)
2. **D** - (The rectangle is rotated 90 degrees so it is now horizontal and not vertical. The top letter is rotated 180 degrees while the bottom letter stays as it is. It doesn't matter which goes on the left or right.)
3. **B** - (Both the outer and inner shape are rotated 180 degrees. The horizontal lines in the outer shape are changed to vertical lines and the inner shape changes colour.)

Odd One Out

1. **D** - (The number of stars equals the number of sides on the black shape in each answer except for D which has a triangle, so 3 sides, but has 4 stars.)
2. **D** - (There are the same number of dashed lines as stars in all except D which has 3 dashed lines and 4 stars.)
3. **E** - (Answers A, B, C and D all start with a dark shape on top then alternate between dotted shading and dark. However, E starts with dotted shading on top then alternates between dark and dotted shading and so is the odd one out.)

Rotations

1. **C** - (C is a rotation of just under 180 degrees clockwise of the original.)
2. **A** - (A is a rotation of 180 degrees of the original.)
3. **D** - (D is a rotation of around 45 degrees clockwise of the original.)

Code Breaker

1. **C** - (You can work out that B stands for the cones pointing upwards as there two of them. Therefore this means that T stands for the cone pointing downwards and Z stands for the cone pointing to the left. There are two N's in the second letter, so this means that N stands for having no shapes on the bottom of the cone. Having stars on the bottom of the cone is therefore D. So the final answer is TD.)
2. **D** - (You can work out that E stands for light shading of the inside shape as there are two of them. Therefore, this means that F stands for the inside shape being white. All of the second letters are different and as there are two trapeziums, the second letter must be the type of circle around the shape. The thick, lightly shaded circle is therefore X. So, the final answer is FX.)
3. **B** - (You can work out that C stands for light shading of the inside shape as there are two of them. Therefore, this means that D stands for the inside shape being white. All of the second letters are different and as there are two stars, the second letter must be the type of square around the shape. The thick, lightly shaded square is therefore X. So, the final answer is DX.)

Missing Sequence

1. **A** - (The squares keep alternating with three changes each time. The arrow changes direction from right to left or left to right, the octagon changes colour from black to white or white to black and the circle changes from white to black or black to white. So, the answer must be A.)
2. **B** - (The squares keep alternating with two changes each time. The triangle is reflected through a horizontal line through the centre of the square and the diamond changes colour from dark to white or white to dark. So, the answer must be B.)
3. **E** - (As you move from left to right the stars and circles keep alternating between the top and bottom. The number of rows of stars also decreases by one while the number of rows of circles increases by one. So, the final answer must have two rows of stars on the bottom and four rows of circles on the top so must be E.)

Missing Square

1. **D** - (You can see in the left hand column that the two corner squares have the arrows rotated 180 degrees. You can also see from the bottom row that the two corner squares also have the arrows rotated 180 degrees. If you rotate the top left square by 180 degrees you will find that the answer is D. Also, if you rotate the bottom right square by 180 degrees you will find that the answer is D.)
2. **D** - (You can see in the left and right hand column that the arrows remain pointing in the same direction and that the only change is that the lines alternate between solid and dashed. The middle square must therefore be a dashed line with a circle at the end in the bottom right. Therefore the answer is D.)
3. **E** - (If you look at the top two rows you will see that the shapes remain the same as you move from left to right and that the two changes are that the left and middle shape have vertical lines in and the right hand shape is white and also that the left and right square have dotted shading behind the shape and the middle square is white behind. Using this logic for the missing square, the shape must be a circle, it must have vertical lines in and it must have a white background. The answer is therefore E. It can't be A as the circle has got smaller in it whereas it should remain the same size.)

Most Like

1. **D** - (The outer line of the shape is solid, the next line is dashed, the final line is solid again and there is a solid line star in the centre. The only answer that fulfils all of these is D.)

2. **E** - (In each of the squares on the left there is a thick chevron with dotted shading inside. The answers B and D are both thin chevrons, so the answer has to be E as it is the only thick chevron with dotted shading.)
3. **A** - (The first square has a triangle in, which has three sides, and three stars. The second square has a pentagon in, which has five sides, and five stars. The only answer where the number of stars equals the number of sides of the shape is A.)

Nets

1. **B** - (You can see from the cube that the left hand side of the € should line up with the top of the £ sign. The right hand side of the £ sign should also line up with the left hand side of the $ sign. From this information, you can see that B is the only possible answer.)
2. **C** - (You can see from the cube that the right hand side of the 13 should line up with the top of the 14. The right hand side of the 10 should also line up with the left hand side of the 14. From this information, you can see that C is the only possible answer.)
3. **A** - (You can see from the net that the pentagon has a white square above it. Also, when the net is folded, the horizontal lines on the top two squares will be horizontal, running into the pentagon square, rather than vertical. From this information, you can see that the only possible answer is A.)

3D Shapes

1. **B** - (It can't be D as D doesn't have the right angle shape you can see in the question shape. It can't be C as C doesn't have a long enough block for the horizontal block at the back of the question shape. It can't be A as there must be at least two of the two cube long blocks because you can see two of them on the right hand side of the question shape. Therefore it is B. B has the small right angle shape, a long enough block for the horizontal block at the back of the question shape, it has three of the two cube long blocks which meets the requirement of the two you can see, the third two cube long block goes at the top of the question shape horizontally and the cube goes at the top on the left hand side.)
2. **A** - (In A you can see the two squares on the right side matches the two cubes in the shape. You can also see the square at the bottom matches the sole cube at the bottom. You can also see the three squares in the top left and the three squares in A. So it must be A.)
3. **C** - (In C you can see the bottom four squares line up with the four cubes at that bottom of the question that form a square. There are then two cubes above on the right hand side which line up with the two squares on the right in C.)
