Speed and Accuracy Test

- You have eight minutes. Children should be working towards scoring 100%.
- Watch out for the changes to + /÷ / - / x
- This test will be repeated five times, where mistakes are made it will be an indication that further times tables work and attention to detail is necessary.

Spot the mistakes

④ Raj may have guessed.

Remember the bottom of the fractions must be the same to add them (and we do to the top what we do to the bottom) so ….. $^3/_{10} + {}^4/_{10}$

We can now add $^3/_{10} + {}^4/_{10} = {}^7/_{10}$ This cannot be simplified so $^7/_{10}$ is the answer

⑥ Find the product means multiply NOT add. The answer should be 138.

⑧ The mistake made here is that while 364 looks like the numbers are in the right order they are not in the right columns. (3 x 1000) = 3000 not 300, (6 x 100) = 600 not 60, (4 x 10) = 40 not 4. So the correct answer is 3640

⑪ This is probably down to not reading the question properly. The correct answer is 2m

⑫ These questions can throw children. The correct method is to reverse the question so X = (6 x 9) + 4 so X = 58
