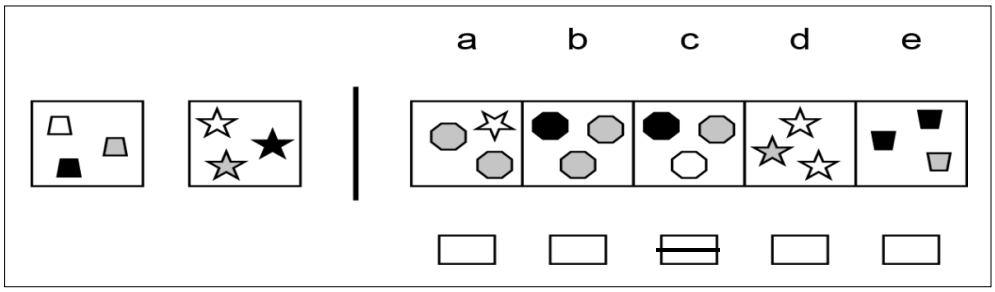
# Non-Verbal Reasoning

## 7. MOST LIKE / TYPE 7

Example



Explanation

In the first two squares, the two sets of shapes are different and the order of colours is different. The similarity is the fact that there is one black, one white and one lightly shaded shape. Therefore the answer must be C.

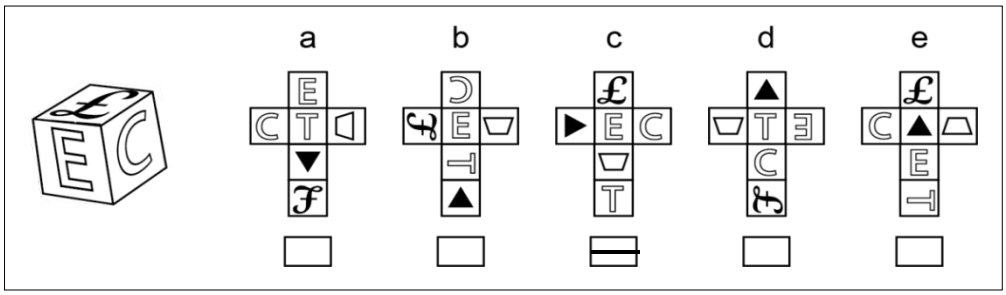
## 8. NETS / TYPE 8

**Example**



**Explanation**

You can see from the cube that the bottom of the £ sign should line up with the top of the E. The right hand side of the E should also line up with the left hand side of the C. From this information, you can see that C is the only possible answer.

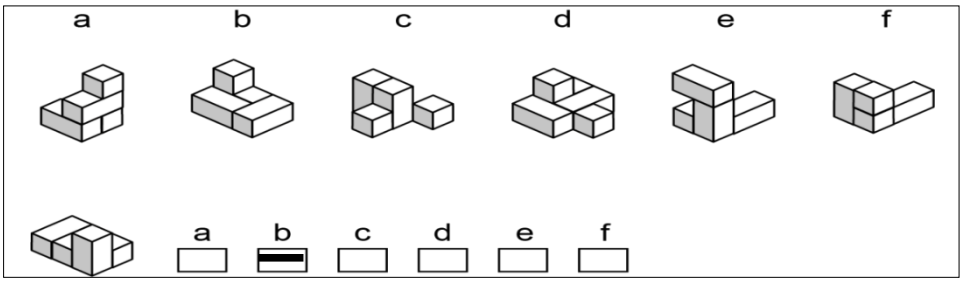
# Non-Verbal Reasoning

## 9. 3D SHAPES / TYPE 9

**Example**



**Explanation**

You are trying to work out which answer rotates to give the new shape at the bottom. In this case you can see B has rotated 180 degrees so the answer is B.

**Non-Verbal Reasoning**

**Most Like**

1. **B** - (In both squares on the left there are a set of three shapes that are the same shape and get smaller and are stacked inside each other. B and C both have three shapes the same that are stacked inside of each other, getting smaller. However, C has an outer shape with a dotted outline whereas the two sets of example shapes don't have any shapes with dotted outlines, so the answer is B.)
2. **C** - (In the two squares on the left there are three shapes with vertical lines, one with horizontal lines and one with dotted shading in each. The only answer that has the same is C.)
3. **E** - (In each of the squares on the left there is one medium sized, black pentagon inside. The pentagons in B and D are both too small, the pentagon in A is too big are there are two pentagons in B, so the answer has to be E as it is the only medium sized, black pentagon.)
4. **A** - (The two shapes on the left both have dashed outlines and four shapes inside, with a black cross at the top, an arrow head on the left and right pointing towards the centre and a white oval at the bottom. A is the only possible answer as D has a black oval at the bottom.)

**Nets**

1. **A** - (From the net you can see that the black square with the three thick, vertical, white lines in has the black square with the three thin, horizontal, white lines in below it. The black square with the three thin, horizontal, white lines in also has the solid black square to its right. From this information, you can see that the answer is A.)
2. **C** - (You can see from the cube that the lightly shaded square has a square with a circle in above it. The lightly shaded square also has a square with diagonal lines in to its right hand side with the lines running from the bottom left to the top right. From this information, you can see that the only possible answer is C.)
3. **D** - (You can see that the net is made up from one hexagon and six triangles. The only shape that is made up from one hexagon and six triangles is D, therefore the answer is D.)
4. **D** - (You can see from the cube that the bottom of the 9 lines up with the top of the Ð sign. The right hand side of the Ð sign also lines up with the

left hand side of the trapezium. From this information, you can see that the answer is D.)

**3D Shapes**

1. **D** - (You can see that D has been rotated 90 degrees anti-clockwise and then also been turned 90 degrees anti-clockwise.)
2. **A** - (The correct answer should have two 'L' shaped blocks and a cuboid. The answer cannot be B because the block underneath the right-hand 'L' shape must be of at least 2 cubes length, and so cannot be a single cube.
3. **D** - (The shape is rotated 90 degrees about the z-axis.)
4. **A** - (In A you can the three squares in a row line up with the three diagonal cubes in the shape. The square at the top right of the 2D view represents the cube that is part of the L shaped block at the top of the shape. The square at the bottom left of the 2D view then represents the single cube at the bottom of the 3D shape.)
