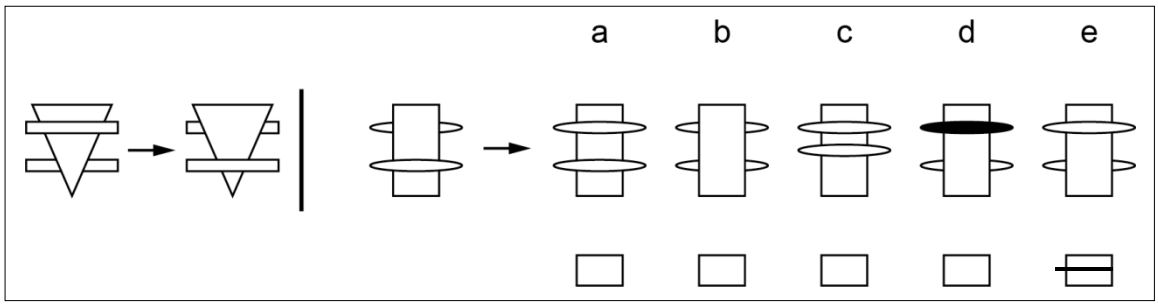
Non-Verbal Reasoning

1. LIKE SHAPES / TYPE 1

Example



Explanation

There is no change in the large shape from the first set of shapes to the second. However the shape that is behind the larger moves to the front and the other shape that is in front moves behind.

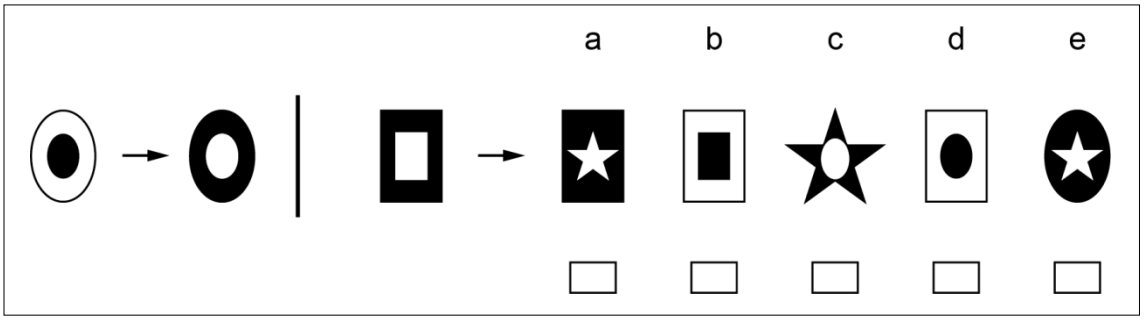
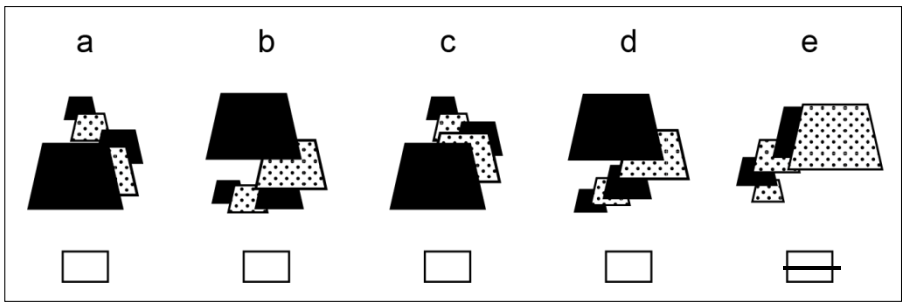
3



Non-Verbal Reasoning

2. ODD ONE OUT / TYPE 2

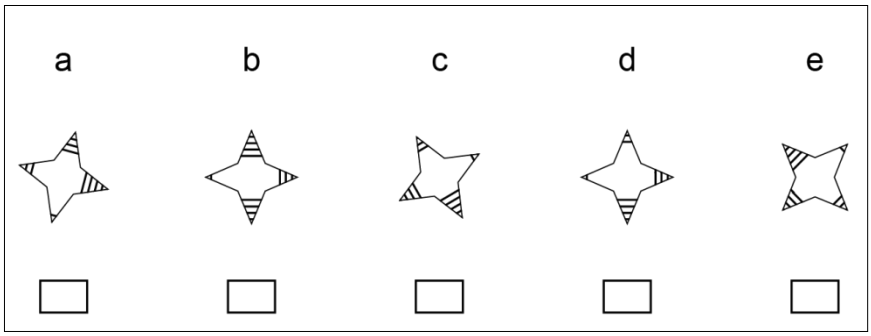
Example



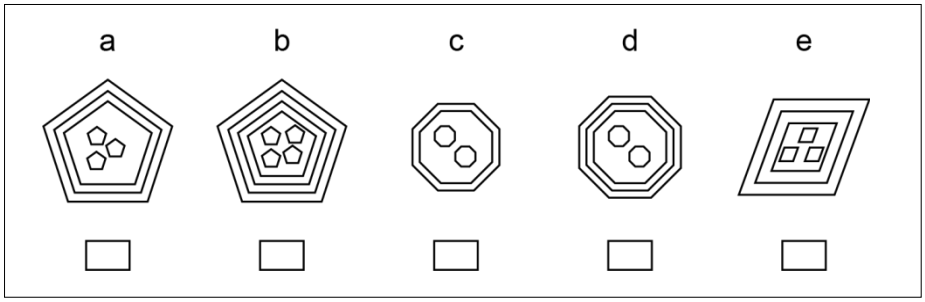
Explanation

Answers A, B, C and D all start with a black shape on top then alternate between dotted and black. But E starts with a dotted shape then alternates between black and dotted.

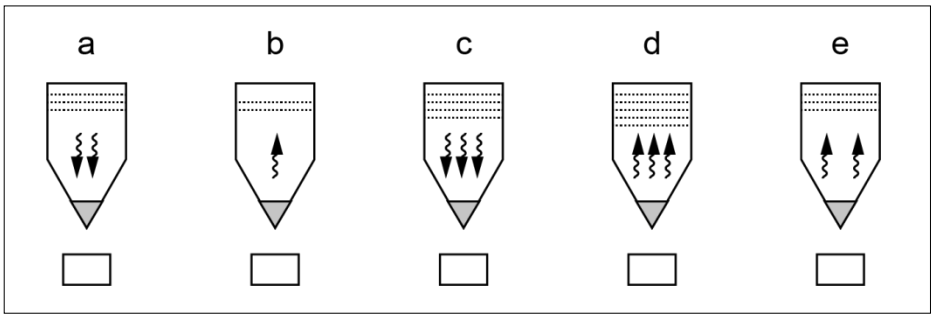
1



2



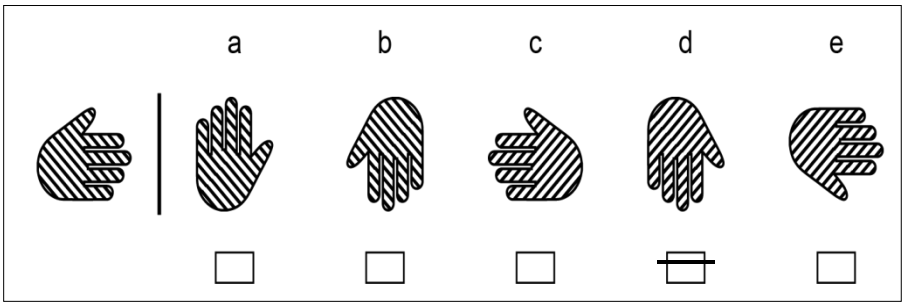
3



Non-Verbal Reasoning

3. ROTATIONS / TYPE 3

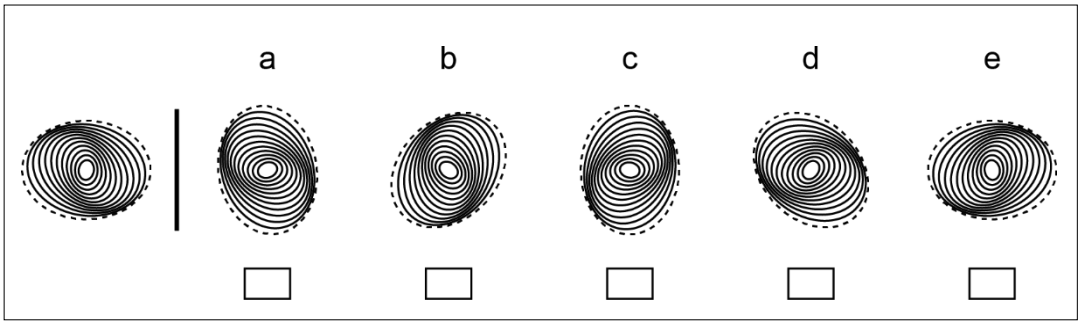
Example



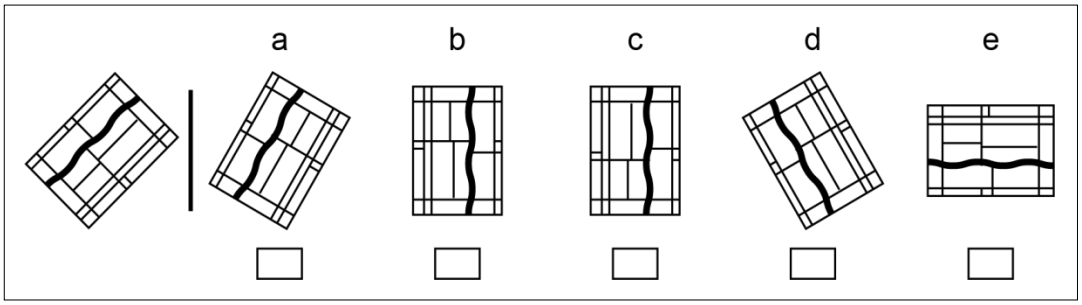
Explanation

Only one of the answers is a rotation of the original. D is the only possible answer as it is the only hand with the thumb still on the left hand side. The lines also go from the bottom left of the hand to the top right.

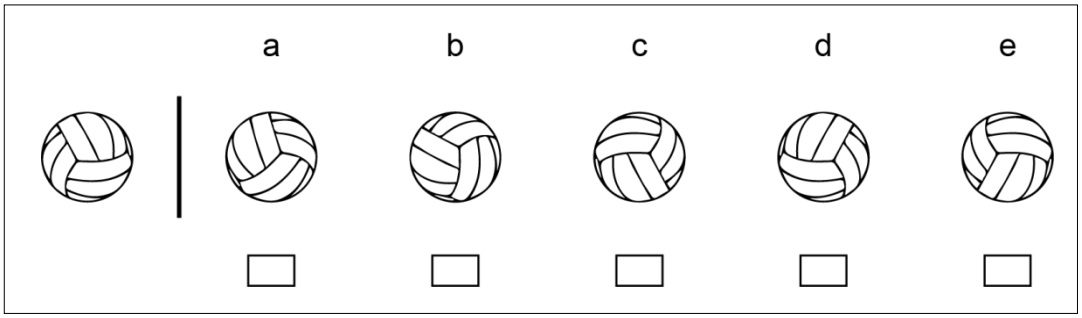
1



2



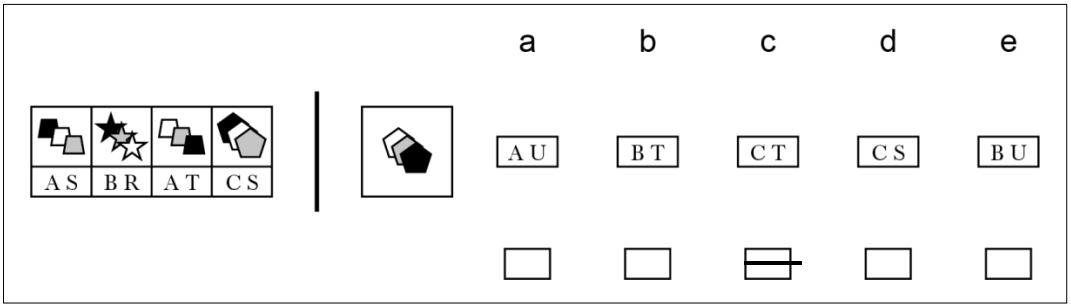
3



Non-Verbal Reasoning

4. CODE BREAKER / TYPE 4

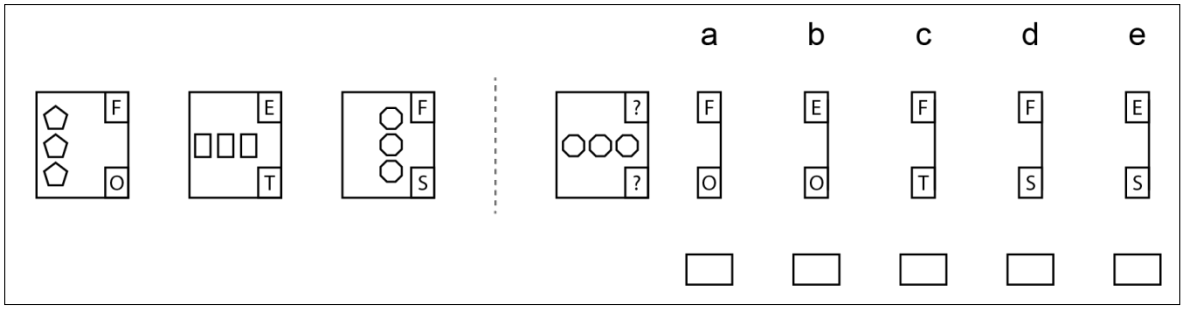
Example



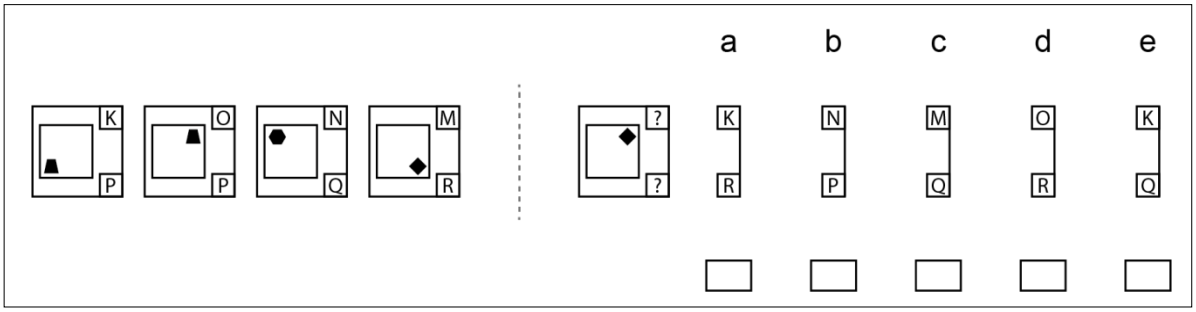
Explanation

You can work out that A is the trapezium as there are two of them. Therefore this means that B is the star and C is the pentagon. There are two S's in the second letter, so this must mean that S stands for the order of shading being black, white, light. White, light, black is therefore T. So the final answer is CT.

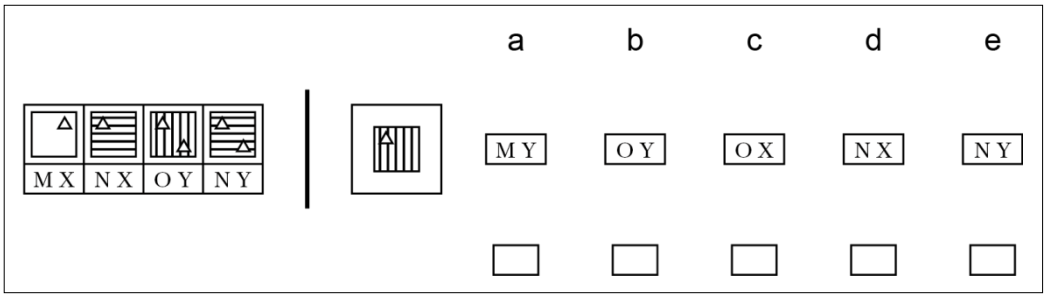
1



2



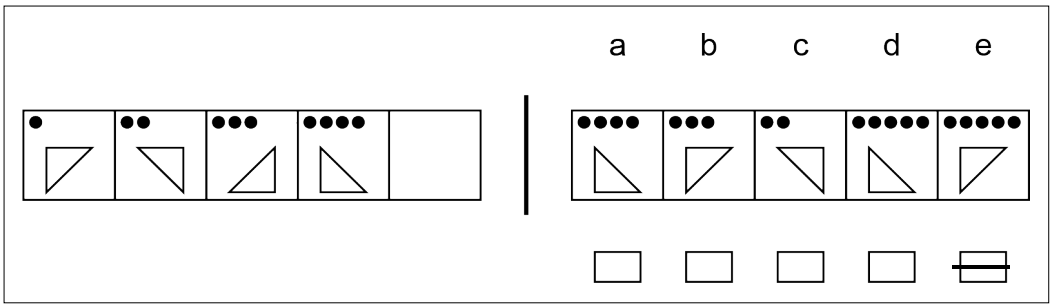
3



Non-Verbal Reasoning

5. MISSING SEQUENCE / TYPE 5

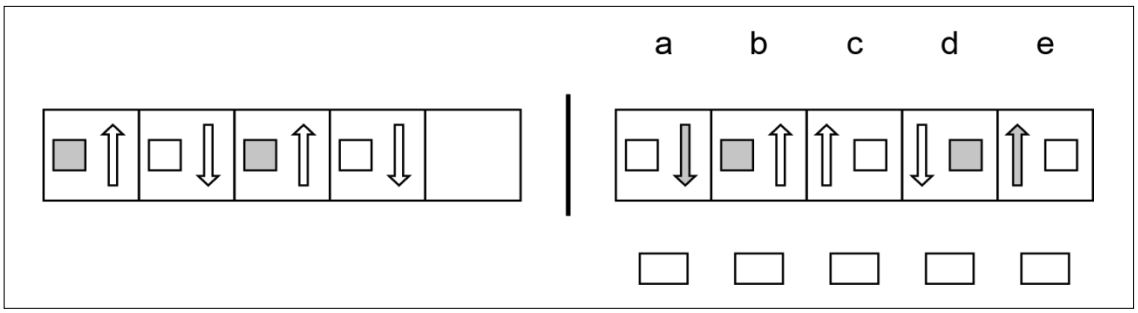
Example



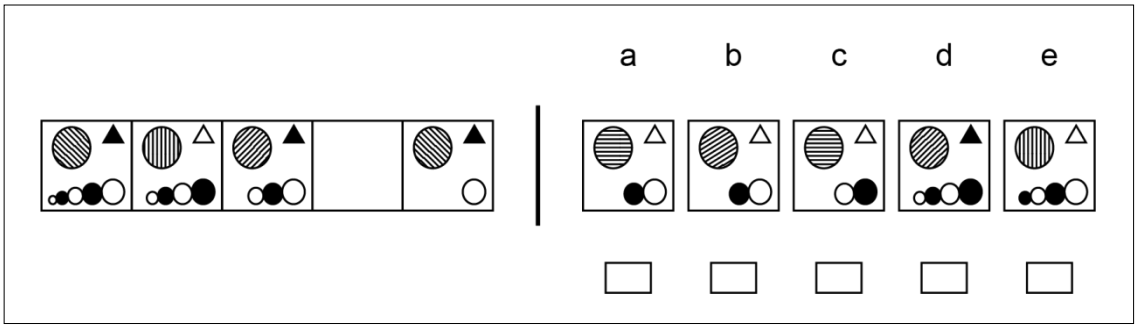
Explanation

The first sequence to look at is that the number of circles at the top of each square is increasing by 1 each time. This means that you know that the answer is either D or E as the final square will have 5 circles. The next part is to look at the triangles which are rotating 90 degrees clockwise each time. This means that you know the final answer is E.

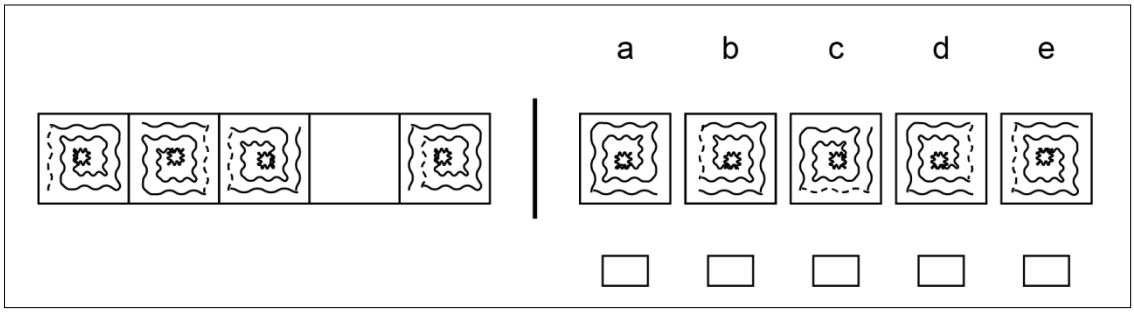
1



2



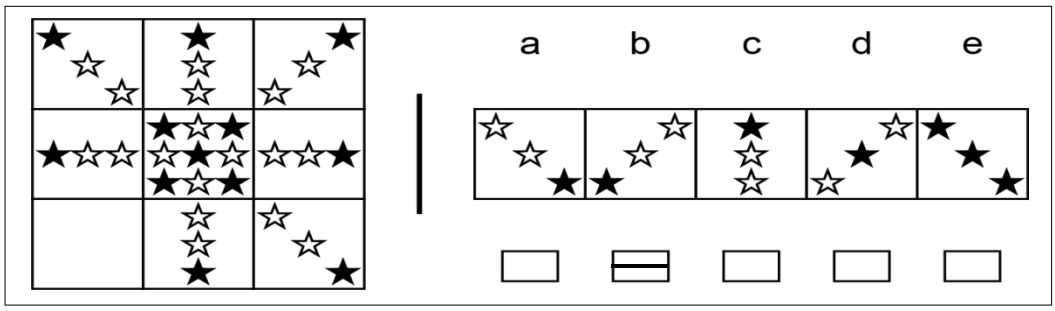
3



Non-Verbal Reasoning

6. MISSING SQUARE / TYPE 6

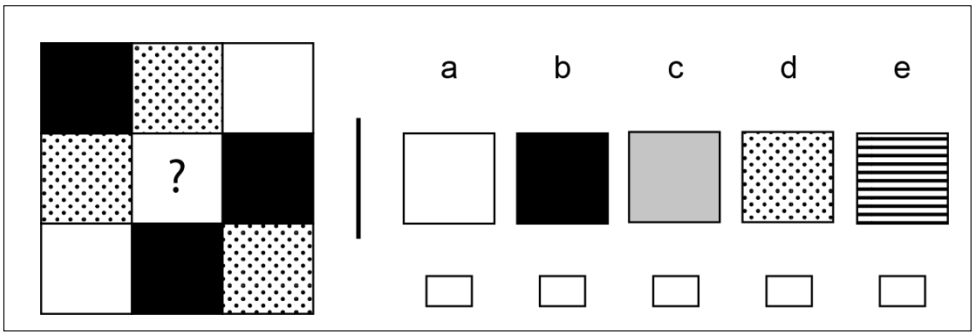
Example



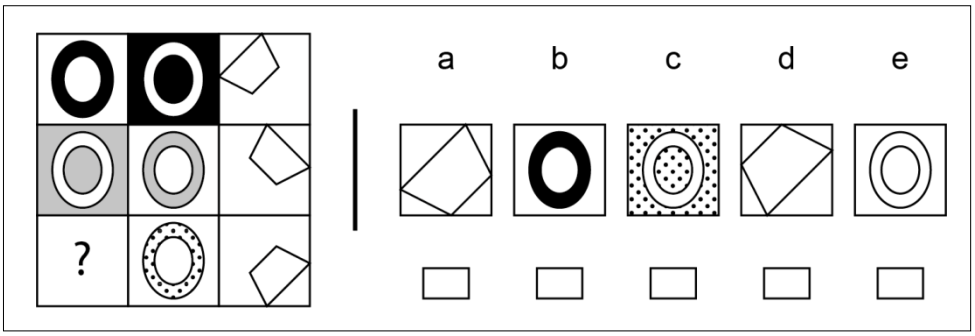
Explanation

In the three given corner squares, there are three starts, one black in the outermost corner and two white. The direction of the line of stars is always pointing towards the centre square. Therefore the answer must be B.

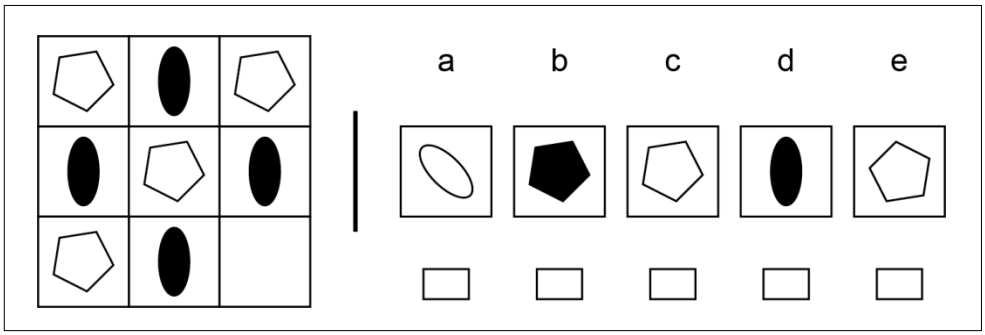
1



2



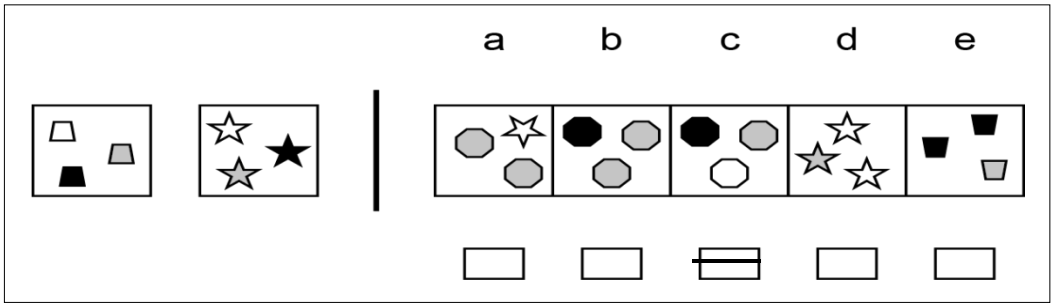
3



Non-Verbal Reasoning

7. MOST LIKE / TYPE 7

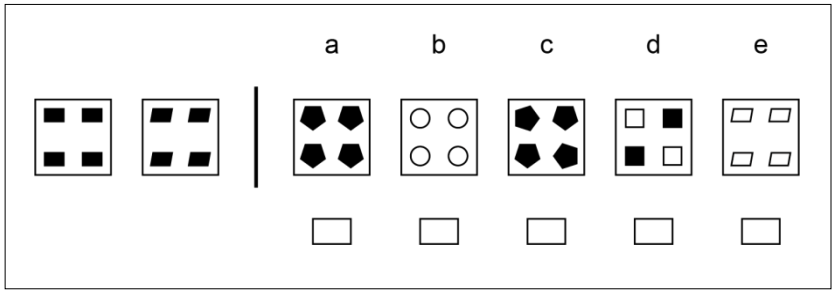
Example



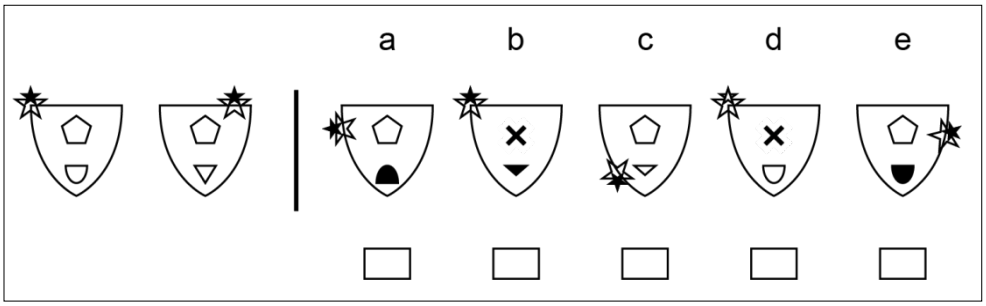
Explanation

In the first two squares, the two sets of shapes are different and the order of colours is different. The similarity is the fact that there is one black, one white and one lightly shaded shape. Therefore the answer must be C.

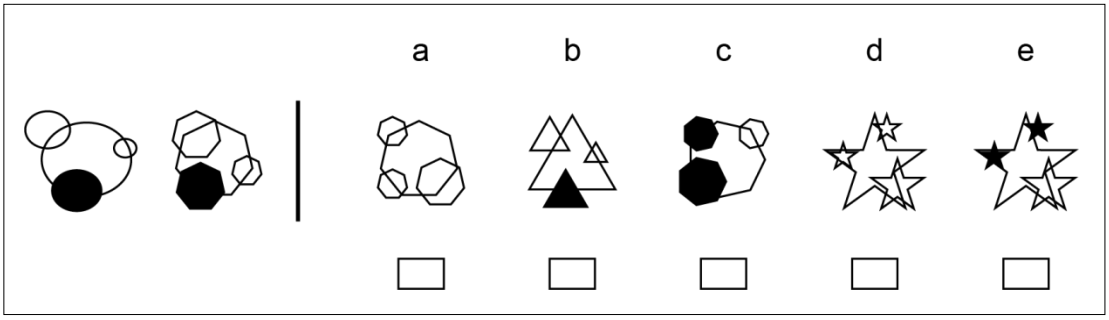
1



2



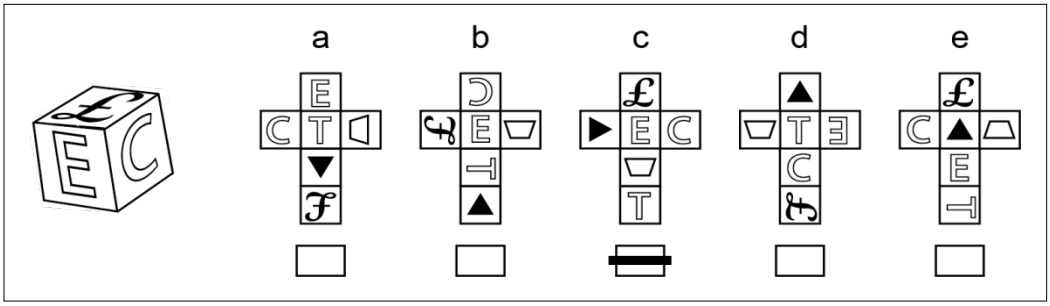
3



Non-Verbal Reasoning

8. NETS / TYPE 8

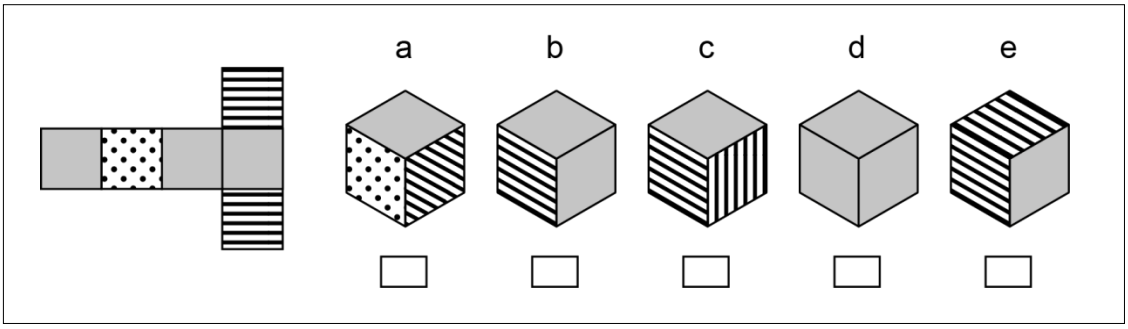
Example



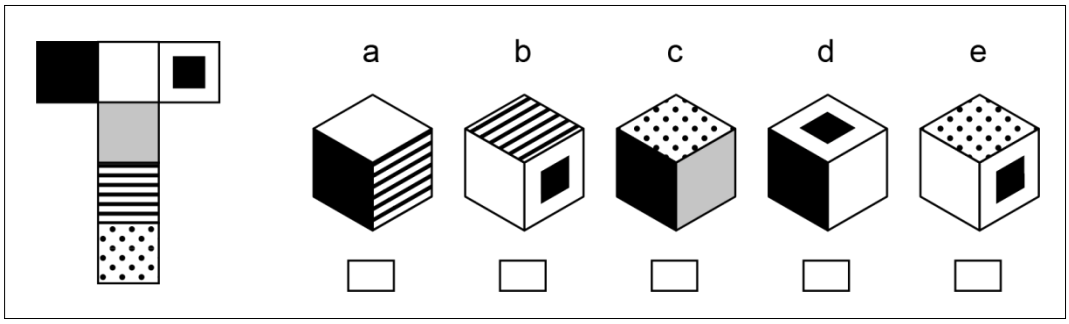
Explanation

You can see from the cube that the bottom of the £ sign should line up with the top of the E. The right hand side of the E should also line up with the left hand side of the C. From this information, you can see that C is the only possible answer.

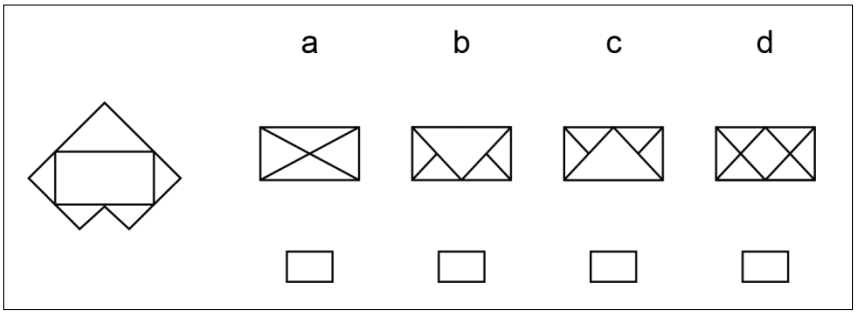
1



2



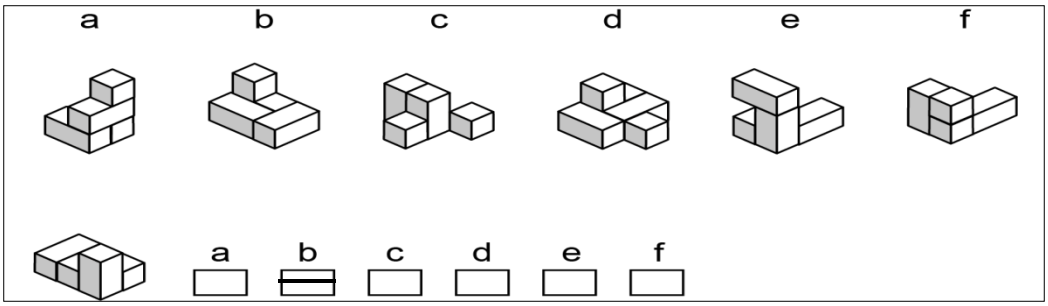
3



Non-Verbal Reasoning

9. 3D SHAPES / TYPE 9

Example



Explanation

You are trying to work out which answer rotates to give the new shape at the bottom. In this case you can see B has rotated 180 degrees so the answer is B.

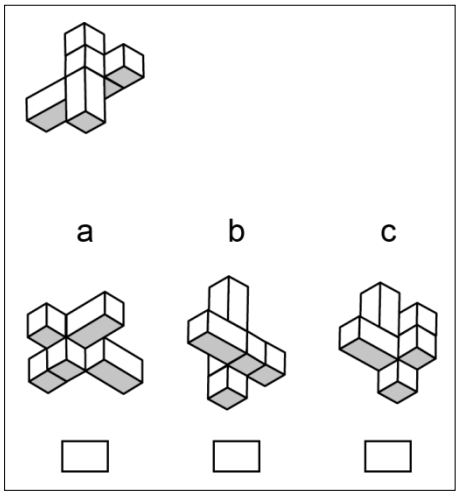
3



Like Shapes

1. **C** - (The shape simply changes in colour from black to white.)
2. **D** - (All the shapes stay in the same place but the white shapes turn black and the black shapes turn white.)
3. **B** - (The white areas turn black and the black areas turn white.)

Odd One Out

1. **B** - (Going either clockwise or anti clockwise around the points of the star, the number of lines increases each time going from 1 to 4. However B does not follow this pattern and going clockwise goes from 1 to 4 and anti-clockwise it goes from 1 to 3.)
2. **D** - (The number of shapes in the inside should equal the number of large shapes on the outside. However, D has 2 octagons in the inside but 3 octagons on the outside so is the odd one out.)
3. **D** - (There is one more dotted line than there is number of arrows in all the answers except for D where there are 5 dotted lines and 3 arrows.)

Rotations

1. **C** - (C is a rotation of 90 degrees either clockwise or anti clockwise of the original.)
2. **B** - (B is a rotation of around of 315 degrees clockwise of the original.)
3. **C** - (C is a rotation of 90 degrees anti clockwise of the original.)

Code Breaker

1. **E** - (You can work out that F stands for the three shapes being vertical rather than horizontal as there are two of them. Therefore, this means that E stands for the shapes being horizontal. All of the bottom letters are different, and the only difference between each of them is the type of the three sets of shapes. The octagon is therefore S. So, the final answer is ES.)
2. **D** - (You can work out that P stands for the small trapezium shape as there are two of them. Therefore, Q stands for the hexagon and the R stands for the diamond. All of the top letters are different and the only thing different between all of the squares is the position of the small shape within the square. So, O stands for being in the top right. So, the final answer is OR.)
3. **C** - (You can work out that N stands for the lines in the square being horizontal as there are two of them. Therefore, M stands for there being no lines and O stands for the lines being vertical. There are two pairs of second letters, X and Y. The only similarity between the two Xs is that there is one triangle and so the similarity between the two Ys is that there are two triangles. So, the final answer is OX.)

Missing Sequence

1. **B** - (The squares keep alternating with two changes each time. The arrow changes direction from up to down or down to up and the square changes colour from dark to white or white to dark. So, the answer must be B.)
2. **C** - (There are three changes to each square. Moving from left to right; the lines in the circle rotate 45 degrees clockwise, the triangle changes from black to white or white to black and the smallest circle at the bottom disappears with the remaining circles changing colour from white to black or black to white. So, the final answer must have two circles with white on the left and black on the right, a white triangle and horizontal lines in the circle so must be C.)
3. **D** - (As you move from left to right two changes happen; firstly, the shape is rotated 90 degrees clockwise and secondly the dashed line keeps moving one line to the right, or one line closer to the centre of the spiral. Therefore, the final answer is D.)

Missing Square

1. **A** - (Each of the completed rows and each of the completed columns have one white square, one dotted square and one black square in. The missing square is in the middle row and middle column and both of these have one dotted square and one black square in so the missing square must be a white square so the answer is A.)
2. **C** - (The right hand column is irrelevant as it provides no information for the missing square. If you look at the top row, the colour of the shape becomes the background colour in the second square and the background colour from the first square becomes the new colour of the shape. This is the same in the middle row. By applying this to the bottom row, but in reverse, you can work out that the answer is C.)
3. **C** - (Each of the corner squares has a white pentagon in and in each of the corners they are pointing the same way. The only answer that is a white pentagon that is pointing the same way as those already in the corners is C.)

Most Like

1. **A** - (All the shapes are black and all are copies of each other, with no rotation, just in different corners. The only shape that is like this is A as C has some of the shapes rotated.)
2. **C** - (The shapes on the left both have one white and one black star on the outline of the shape and they also both have two white shapes inside, with the pentagon being the top of the two shapes. The only shape with one black and one white star on the

outline, two white shapes inside and with the pentagon being the top of the two shapes is C.)

3. **B** - (The two sets of shapes both consist of one big shape with two smaller white copies on the edge, of different sizes, and one black copy on the edge, the same size as the larger of the two white copies. The only answer that is like this is B.)

Nets

1. **B** - (You can see from the net that there are two shaded squares next to each other. You can also see that when the net is folded, the square at the top with lines through will be next to the two shaded squares, horizontal to one and vertical to the other. The answer is therefore B as it works and the other answers don't.)
2. **E** - (You can see from the net that the white square and square with the black square in are next to each other, with the black square to the right of the white square. When the net is folded, the dotted square at the bottom will be above the white square and square with the black square in. The answer is therefore E as it works and none of the others do.)
3. **B** - (You can see from the net that when it is folded, there will be two small triangles on the bottom, one on each side and a large triangle on the top. You can see from this that B is the only possible answer.)

3D Shapes

1. **D** - (In D you can see there are 5 squares in a right angle shape that line up with the 5 cubes in a right angle shape in the question. There is one space you can't see if there is a cube or not, but none of the answers would work if there wasn't one so you can assume that there is.)
2. **D** - (You can see that D has rotated around 90 degrees anti-clockwise and then also been turned 90 degrees anti-clockwise.)
3. **B** - (You can see that B has been rotated 90 degrees anti-clockwise and also been turned 90 degrees clockwise.)
