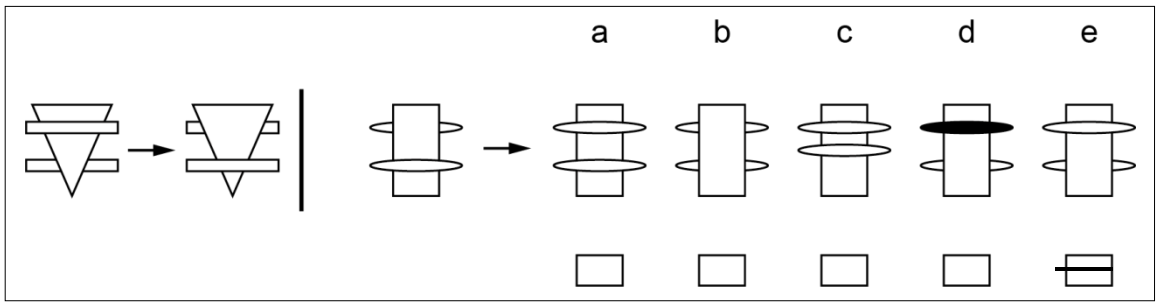
Non-Verbal Reasoning

1. LIKE SHAPES / TYPE 1

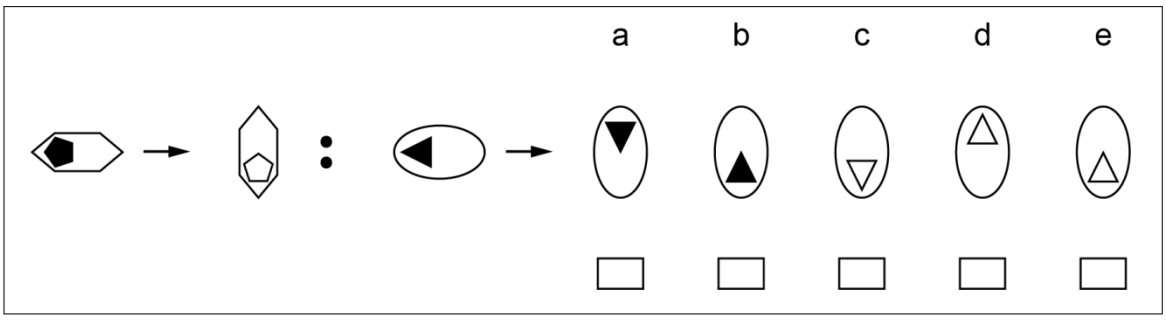
Example



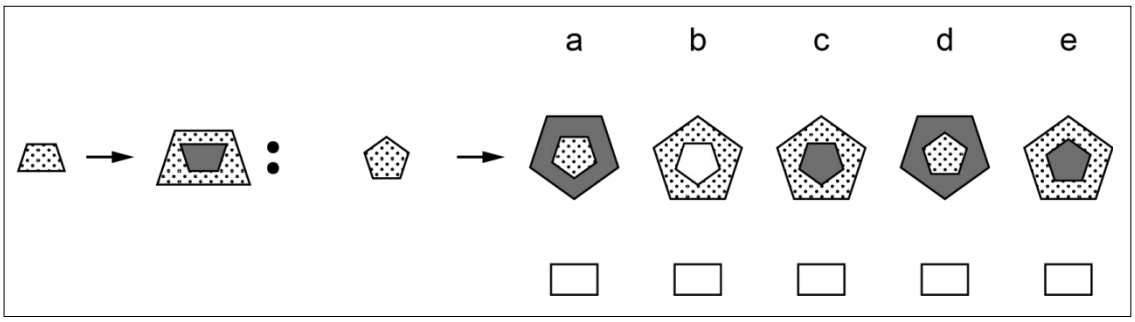
Explanation

There is no change in the large shape from the first set of shapes to the second. However the shape that is behind the larger moves to the front and the other shape that is in front moves behind.

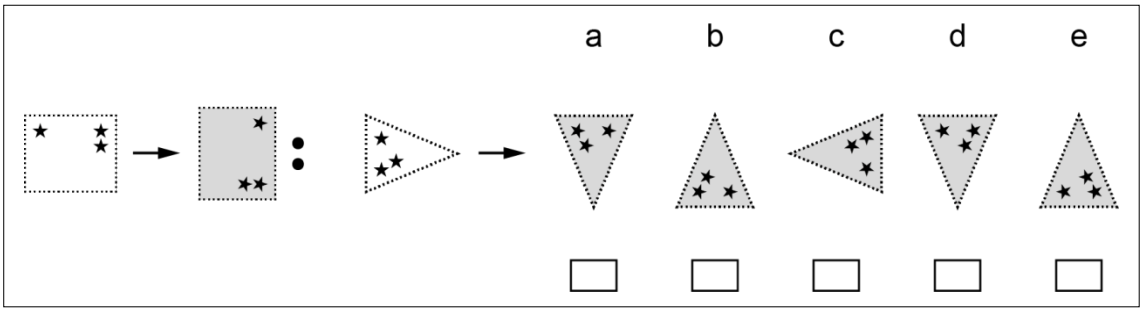
1



2



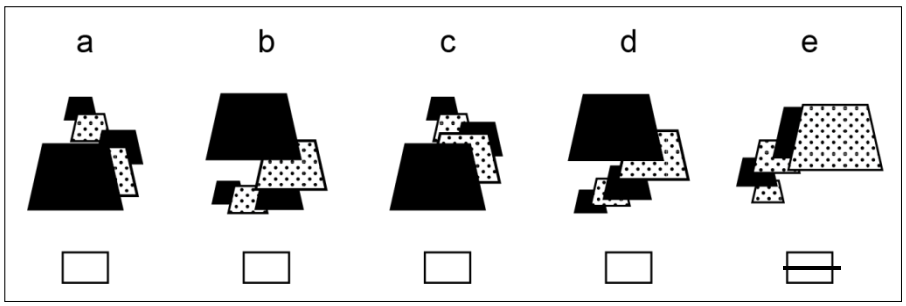
3



Non-Verbal Reasoning

2. ODD ONE OUT / TYPE 2

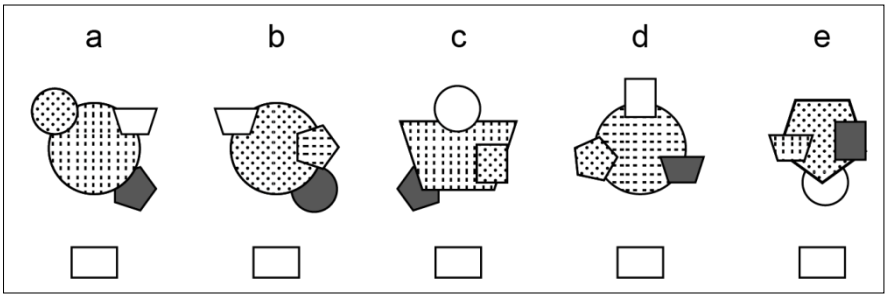
Example



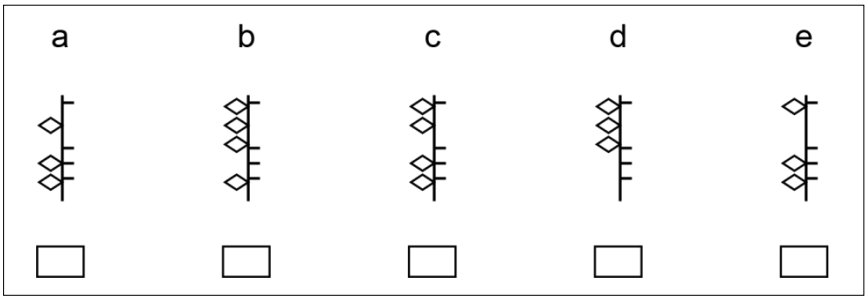
Explanation

Answers A, B, C and D all start with a black shape on top then alternate between dotted and black. But E starts with a dotted shape then alternates between black and dotted.

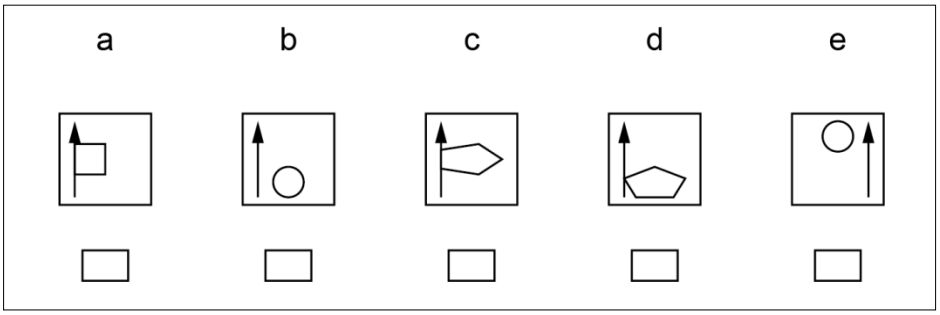
1



2



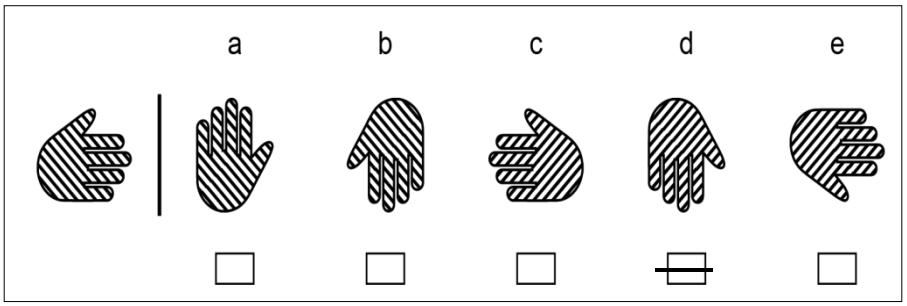
3



Non-Verbal Reasoning

3. ROTATIONS / TYPE 3

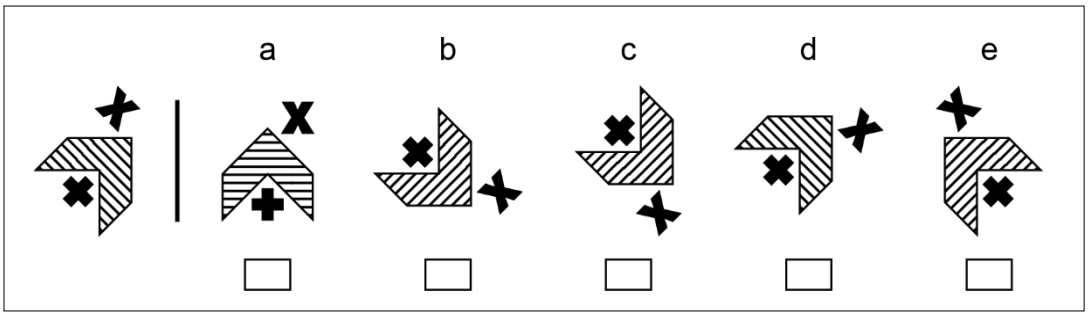
Example



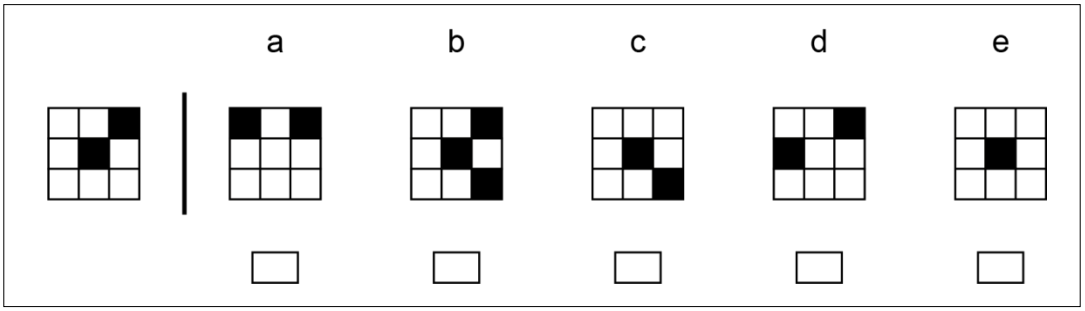
Explanation

Only one of the answers is a rotation of the original. D is the only possible answer as it is the only hand with the thumb still on the left hand side. The lines also go from the bottom left of the hand to the top right.

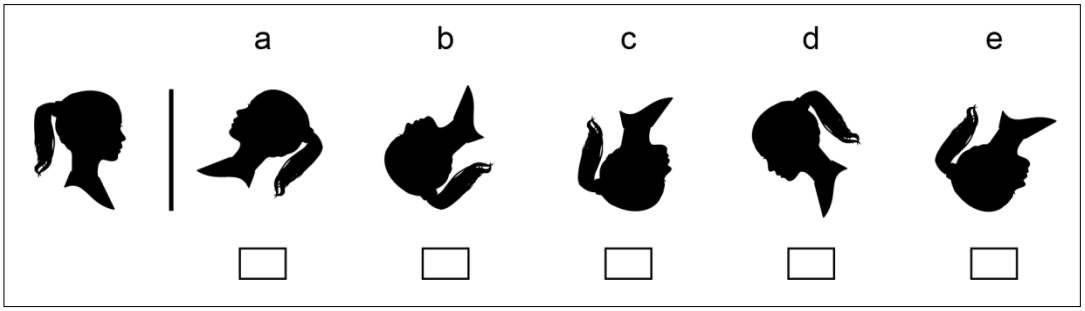
1



2



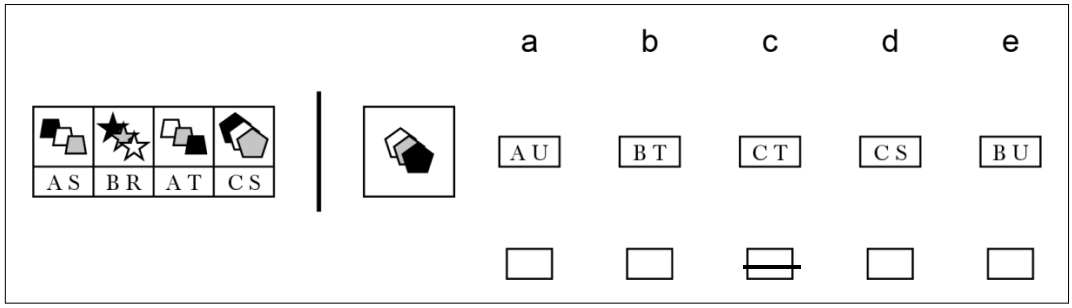
3



Non-Verbal Reasoning

4. CODE BREAKER / TYPE 4

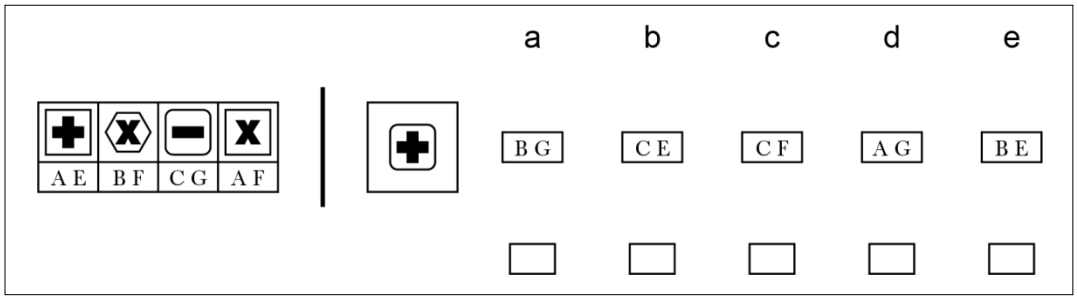
Example



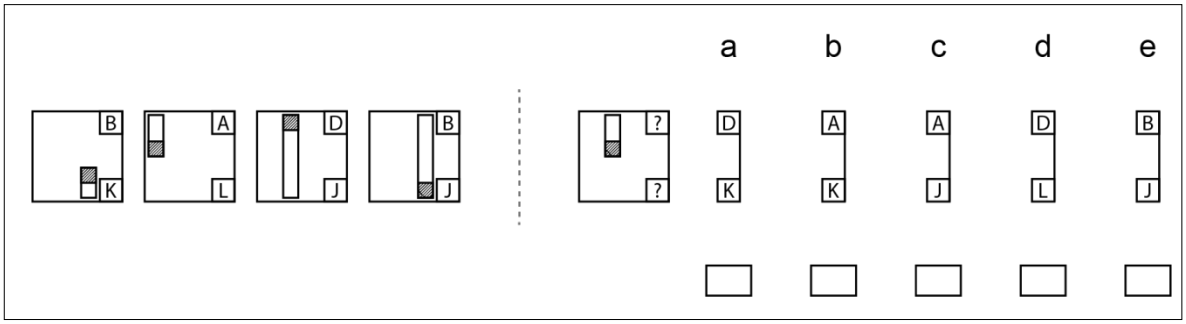
Explanation

You can work out that A is the trapezium as there are two of them. Therefore this means that B is the star and C is the pentagon. There are two S's in the second letter, so this must mean that S stands for the order of shading being black, white, light. White, light, black is therefore T. So the final answer is CT.

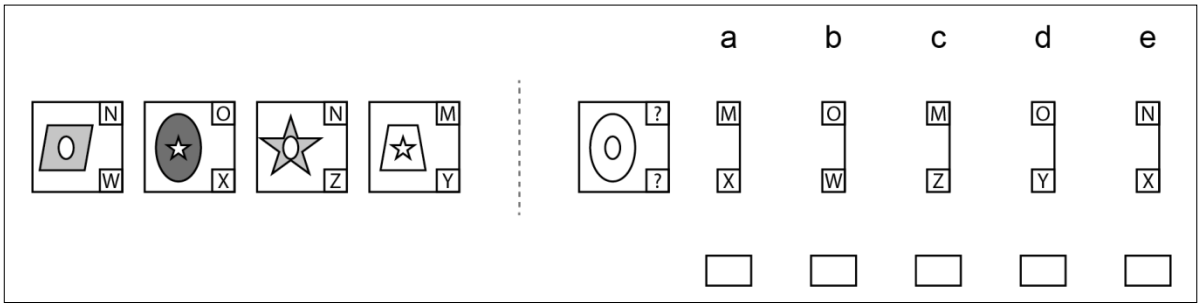
1



2



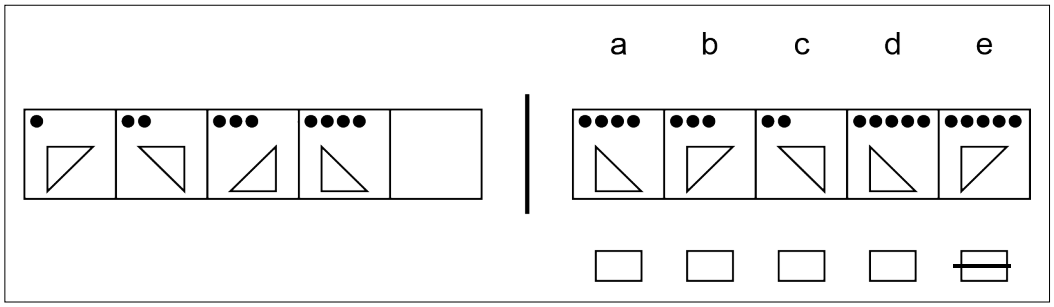
3



Non-Verbal Reasoning

5. MISSING SEQUENCE / TYPE 5

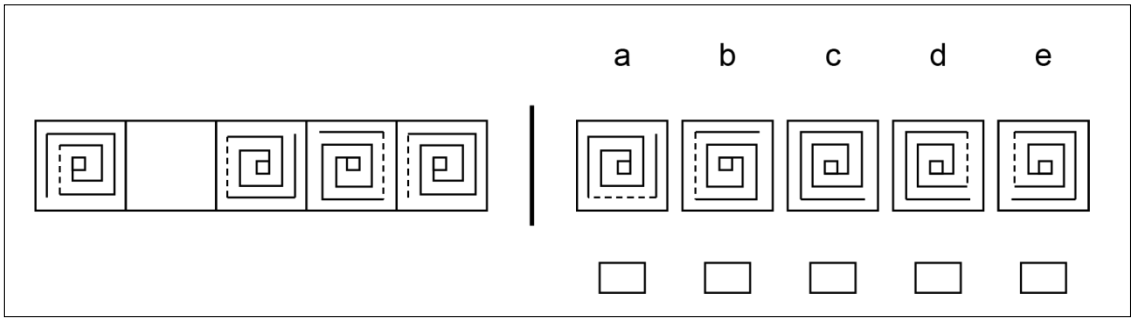
Example



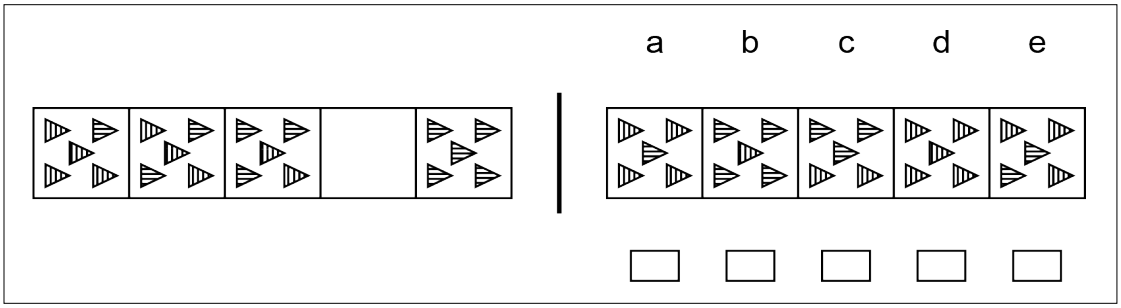
Explanation

The first sequence to look at is that the number of circles at the top of each square is increasing by 1 each time. This means that you know that the answer is either D or E as the final square will have 5 circles. The next part is to look at the triangles which are rotating 90 degrees clockwise each time. This means that you know the final answer is E.

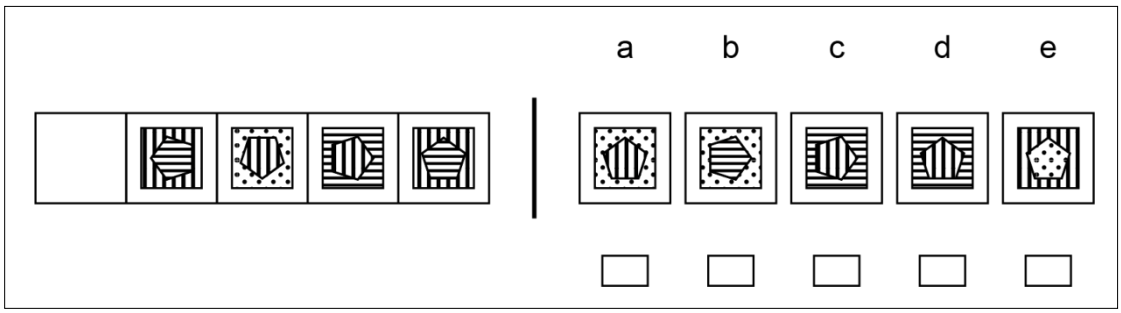
1



2



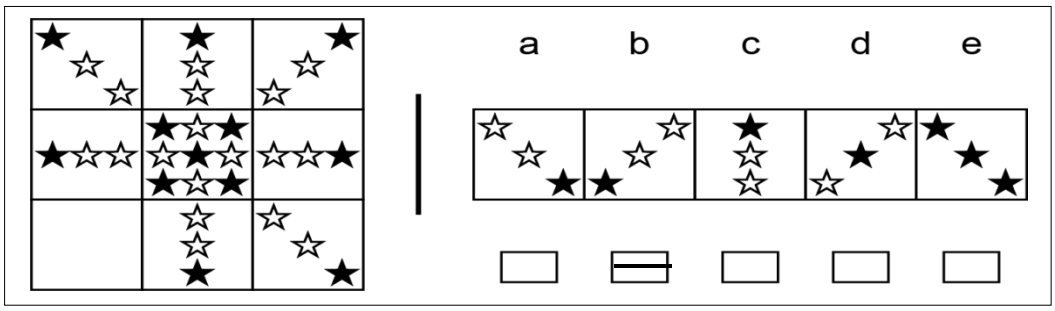
3



Non-Verbal Reasoning

6. MISSING SQUARE / TYPE 6

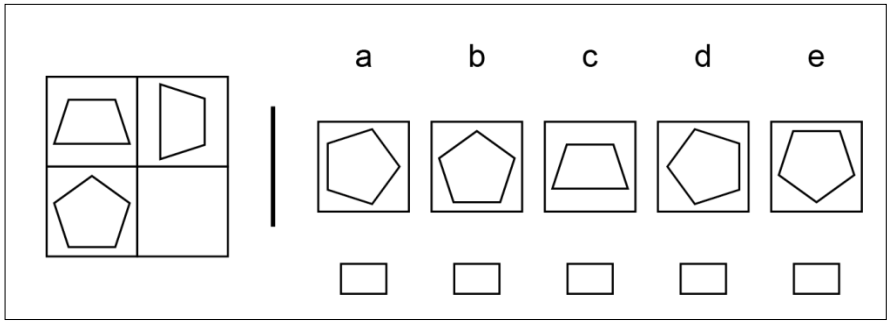
Example



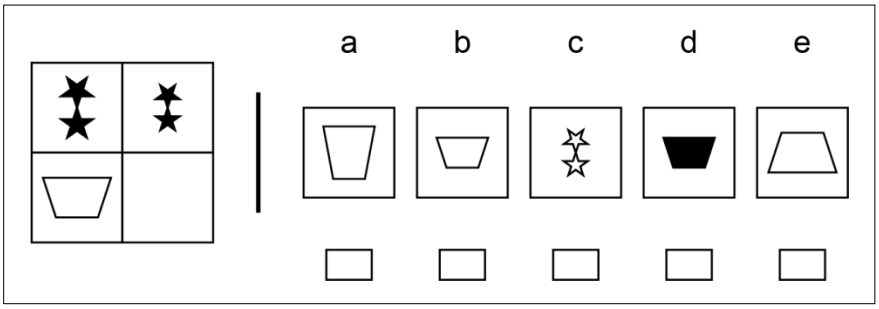
Explanation

In the three given corner squares, there are three starts, one black in the outermost corner and two white. The direction of the line of stars is always pointing towards the centre square. Therefore the answer must be B.

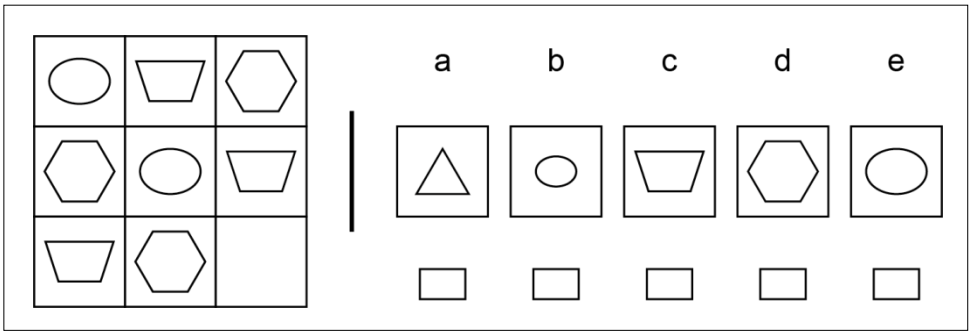
1



2



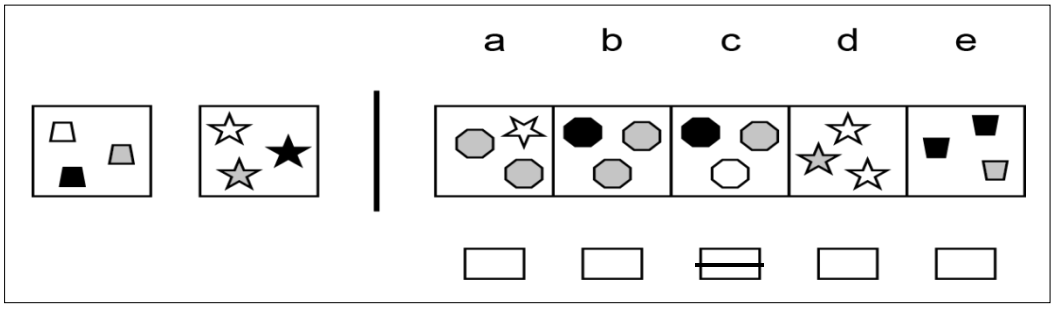
3



Non-Verbal Reasoning

7. MOST LIKE / TYPE 7

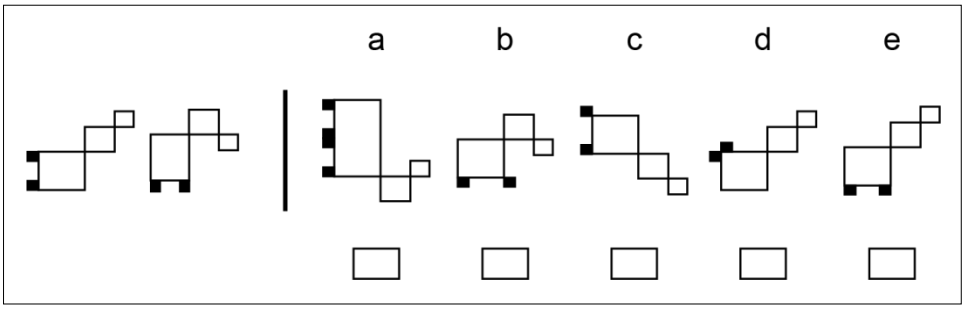
Example



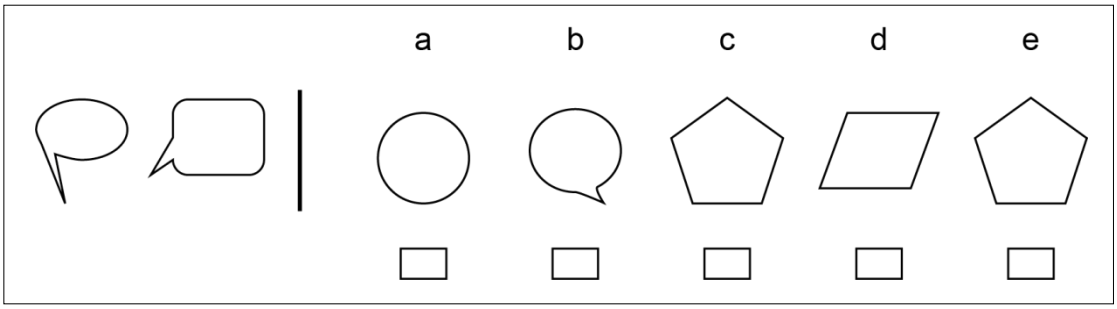
Explanation

In the first two squares, the two sets of shapes are different and the order of colours is different. The similarity is the fact that there is one black, one white and one lightly shaded shape. Therefore the answer must be C.

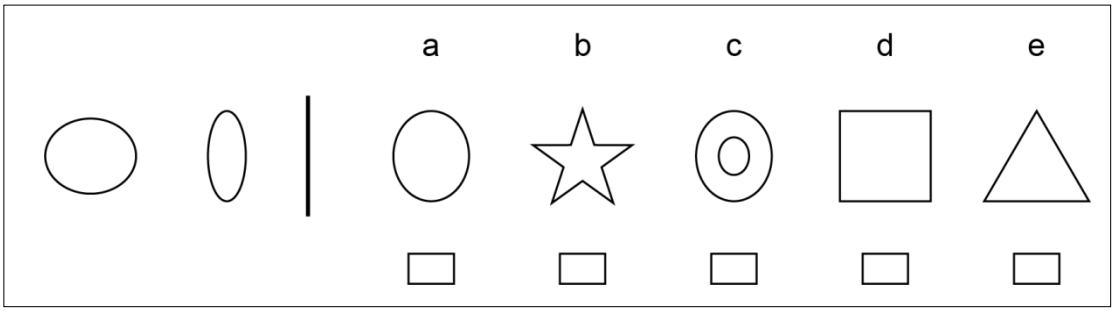
1



2



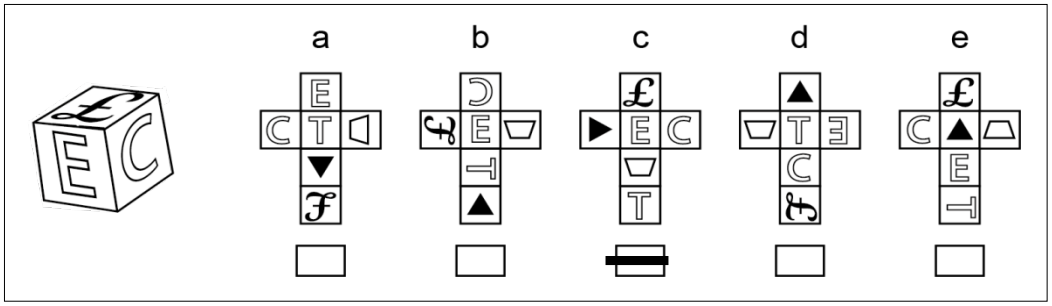
3



Non-Verbal Reasoning

8. NETS / TYPE 8

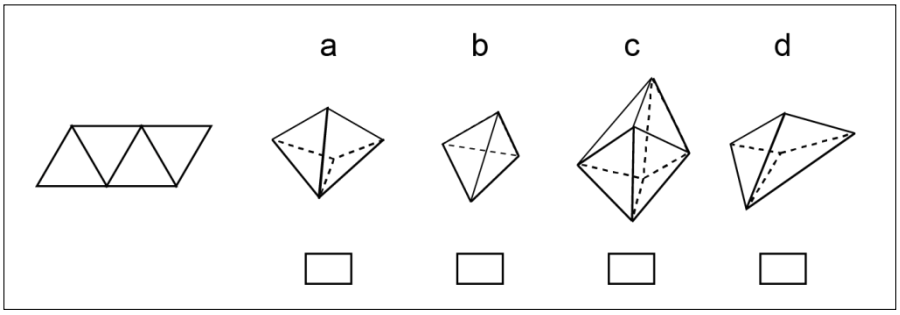
Example



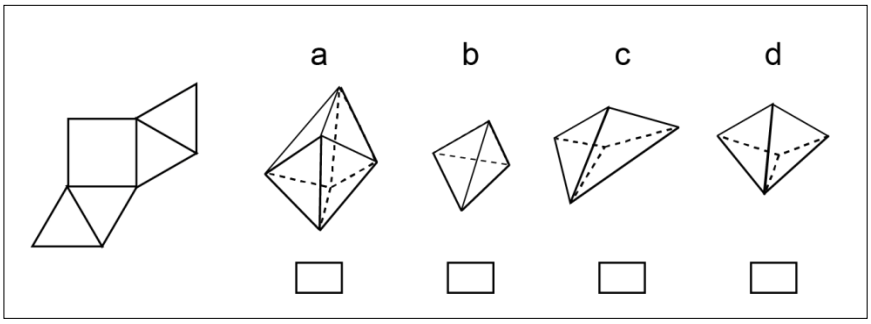
Explanation

You can see from the cube that the bottom of the £ sign should line up with the top of the E. The right hand side of the E should also line up with the left hand side of the C. From this information, you can see that C is the only possible answer.

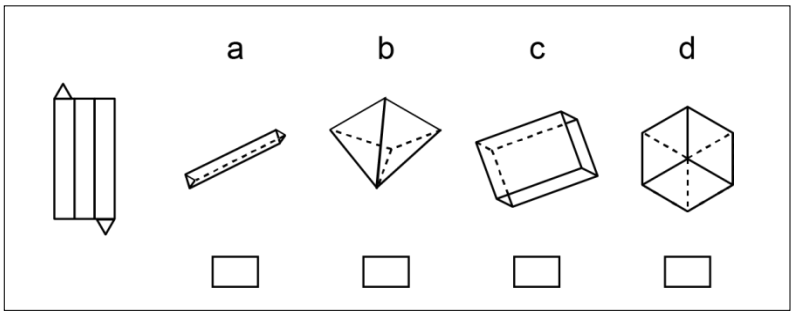
1



2



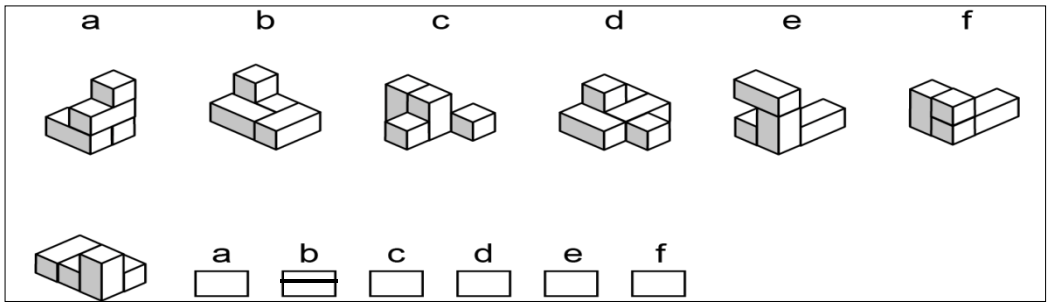
3



Non-Verbal Reasoning

9. 3D SHAPES / TYPE 9

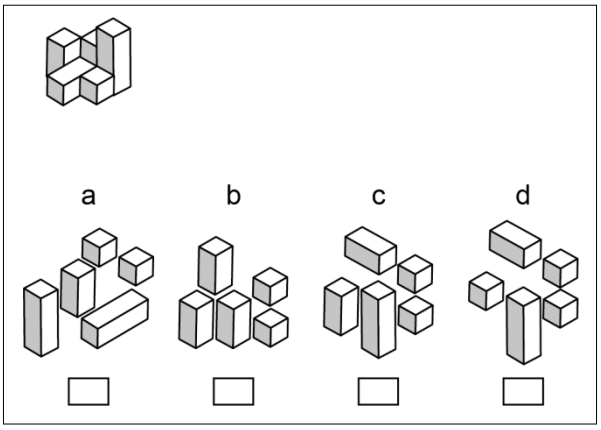
Example



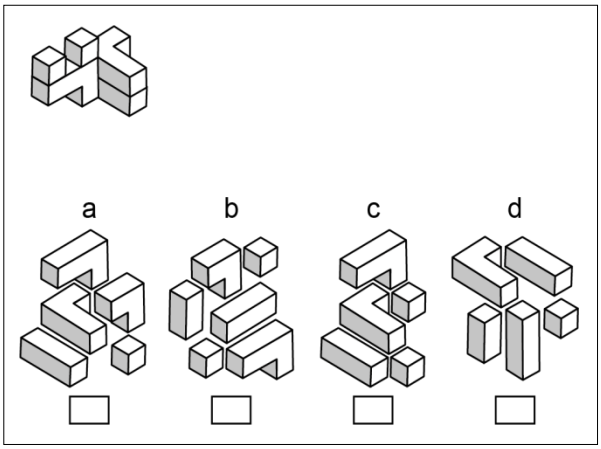
Explanation

You are trying to work out which answer rotates to give the new shape at the bottom. In this case you can see B has rotated 180 degrees so the answer is B.

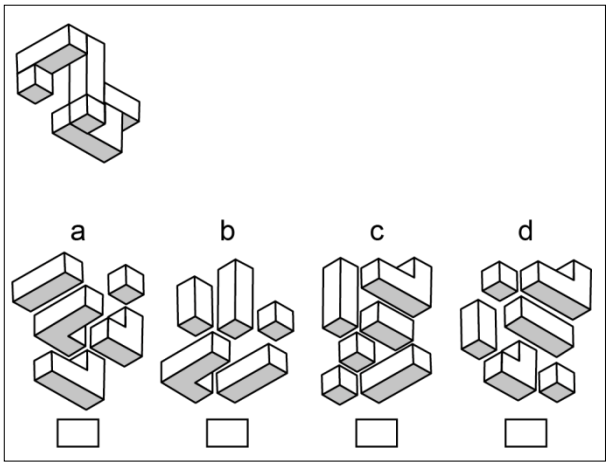
1



2



3



Like Shapes

1. **E** - (The outer shape rotates 90 degrees anti-clockwise, with the inner shape remaining in the same respective position within the outer shape. The inner shape rotates 180 degrees and also changes from black to white.)
2. **C** - (The first shape increases in size and remains with dotted shading, while a smaller copy of it is then inside the first shape having been turned dark and rotated 180 degrees.)
3. **A** - (The first shape is rotated 90 degrees clockwise with the stars remaining in the same respective position within the outer shape. The outer shape also changes from white to lightly shaded. It is A and not D because the pair of stars needs to be on the left after being rotated.)

Odd One Out

1. **D** - (Answers A, B, C and E all have 2 small shapes over the largest shape and one under. D is the only one that doesn't as it has all 3 over.)
2. **D** - (All the answers have 4 dashes on the right hand side. Some of the answers have 3 diamonds and some have 4 diamonds, so that is not the difference. The odd one out is D as all the other answers have their diamonds separated out in some format. D is the only one where all the diamonds are grouped together.)
3. **E** - (The arrows are all on the left hand side of the squares except for in E where it is on the right hand side.)

Rotations

1. **B** - (B is a rotation of 90 degrees clockwise of the original.)
2. **C** - (C is a rotation of 90 degrees clockwise of the original.)
3. **B** - (B is a rotation of around 135 degrees anti clockwise of the original.)

Code Breaker

1. **B** - (You can work out that A stands for the outer shape being a square as there are two of them. Therefore, B stands for the outer shape being a hexagon and C stands for the outer shape being a square with rounded corners. There are two Fs in the right hand letters and similarity between the two is that the inside shape is a black X. So, the black cross is therefore E. So, the final answer is CE.)
2. **D** - (You can work out that B stands for the rectangle being positioned on the right hand side of the square as there are two of them. Therefore, A stands for the rectangle being on the left hand side and D stands for the rectangle being in the centre. In the bottom row of letters there are two Js and the similarity between the two is that rectangle is as long as the square. So, the rectangle being as long as half the square must be L. So, the final answer is DL.)

3. **A** - (You can work out that N stands for the outer shape being lightly shaded as there are two of them. Therefore, O stands for the shape being darkly shaded and M stands for the shape being white. All of the bottom letters are different and the only difference between all four of them is that the outer shapes are all different. So, the outer shape being an oval must be X. So, the final answer is MX.)

Missing Sequence

1. **D** - (As you move from left to right two changes happen; firstly, the shape is rotated 90 degrees anti-clockwise and secondly the dashed line keeps moving one line to the left, or one line further out from the centre of the spiral. Therefore, the final answer is D.)
2. **B** - (As you move from left to right, the vertical lines in one of the triangles turns horizontal. This means that in the fourth square there should be four triangles with horizontal lines and one with vertical lines, so the answer is B.)
3. **D** - (As you move from left to right two changes happen; firstly, the shading of the shapes alternates between horizontal lines, vertical lines and dotted shading and the inside shape having vertical lines, then horizontal lines and then back to vertical lines. Secondly, the inside shape rotates by 90 degrees anti-clockwise each time. So, in the missing square the pentagon (inside shape) should be straight again and there should be horizontal lines in the outside shape and vertical lines in the inside shape. So, the answer is D.)

Missing Square

1. **A** - (In the top row you can see that the shape on the left has been rotated 90 degrees clockwise to form the shape on the right. If you rotate the shape on the left in the bottom row 90 degrees clockwise you will find that the answer is A.)
2. **B** - (From the top row you can see the only difference is that the shape from the left square has got smaller. By applying this to the bottom row you can work out that the missing square is B.)
3. **E** - (The top row goes oval, trapezium then hexagon. In the middle row all the shapes have shifted one column to the right with the right most shape going to the very left. So the missing square must be the oval as it shifts a column to the right again.)

Most Like

1. **E** - (The similarities between the two shapes are that there are three rectangles joined together and the two black squares are within the edges of the rectangle. A has three black squares and B, C and D all have the two black squares outside the edges. Therefore the answer is E as it has its two black squares inside the edges.)

2. **B** - (The two shapes on the left are both types of speech bubbles and B is the only possible answer as it is the only speech bubble.)
3. **A** - (Both of the shapes on the left don't have any straight lines. Both A and C don't have any straight lines, however there is two shapes in C and only one in the two examples on the left, so the answer must be A.)

Nets

1. **B** - (You can see that the net is made up from four equilateral triangles and the only shape that is made up from four equilateral triangles is B, therefore B is the answer.)
2. **D** - (You can see that the net is made up from four equilateral triangles and a square. The only shape that is made up from four equilateral triangles and a square is D. C is made up of a square and four triangles, but they are not all equilateral triangles. Therefore D is the answer.)
3. **A** - (You can see that the net is made up from three rectangles and two equilateral triangles. The only shape that is made up from three rectangles and two equilateral triangles is A, therefore A is the answer.)

3D Shapes

1. **A** - (It can't be B, C or D as there are no long blocks, which is horizontal on the ground in the middle. Therefore it is A. You can see the long block on the ground in the middle. The other long and medium blocks are vertical at the back and front. Then one of the small blocks is on top of the horizontal long block and one is next to it.)
2. **C** - (It can't be B or D as in the shape you can see two of the larger right angle shapes but in B and D there are only one. It also can't be A because A has one of the smaller right angle shapes but it is impossible for this to be in the question shape. Therefore it is C. C has the two larger right angle shapes which you can see in the question, it also has the two cubes which you can see on top of one of the right angle shapes and finally while in the question you can't see what the shape is under the horizontal right angle shape- it is possible to be the long block that is in C, so C still works.)
3. **C** - (It can't be A or B as they both only have one cube whereas you can see in the question shape that there are two cubes. It can't be D as D has a small right angle shape which is not possible to fit in the question shape. Therefore it is C. C has the large right angle shape which can be seen at the bottom of the question shape, the two cubes that are required and three longer blocks that can be seen at the top of the shape- two horizontally and one vertically.
